INTRODUCTION

MESSAGE FROM THE CEO: DONALD ZIPPERIAN, PhD

I am proud to introduce the next generation of excellence here at Pace Technologies!

As a dynamic industry leader, Pace Technologies has ceaselessly pushed the boundaries of quality and customer-centricity for over a quarter century. Our relentless pursuit of perfection has led to cutting-edge equipment that welds state-of-the-art performance with affordability.

This generation of equipment offers our customers enhanced flexibility and control of their sample preparation procedures. These technical upgrades are tempered by our expanding services team who stand ready to provide you with expert guidance for optimal results.

Embracing vertical integration, we've streamlined our supply chain, ensuring unmatched product quality, timeliness, and cost efficiency. Our grinding papers, diamond suspensions, and cutting-edge lubricants are produced in-house to ensure our products meet the highest standards.

It's my hope that our combination of precision, innovation, and customer centricity converges to demonstrate that **quality matters** at Pace Technologies, in every sense of the phrase.

Customer Assistance

For order placement, prices, delivery & order status, contact us:

Phone: +1 (520) 882-6598
Fax: +1 (520) 882-6599
Email: pace@metallographic.com

For product information, metallographic procedures, etchants & troubleshooting guidelines online, visit:

Limited Warranty

MODEL	Blade Diameter	Auto/Manual Y-Table	Auto X-Table	Voltage Options	Max Motor Power
MEGA-T300A	12-inch (305 mm)	Yes	Optional	208Y/380V/480V 480V, 3φ	5.8 hp (4.5 KW) OR 20 hp (15 KW)
MEGA-T350A	14-inch (350 mm)	Yes	Optional	208Y/380V/480V 480V, 3φ	5.8 hp (4.5 KW) OR 20 hp (15 KW)
MEGA-T400A	16-inch (405 mm)	Yes	Optional	208Y/380V/ 480V, 3φ	5.8 hp (4.5 KW) OR 20 hp (15 KW)

Options:

- ◆ Choose the machine that accommodates your preferred blade diameter
- ◆ Add an automated X-axis Table for maximum flexibility on cuts
- ◆ Choose between voltage options to provide the exact amount of power you need

Benefits:

- ◆ Constant torque variable speed Servo Motor (3-phase)
- ◆ Manual or automated Y-Axis table feed
- ◆ X-axis tables have automated X-axis control
- ◆ Programming options for constant feed rate or constant motor load for better control
- ◆ Twin t-slotted stainless steel table
- ◆ Electronic braking system

10-inch Metallographic Abrasive Cutter

2 year warranty
Limited Warranty

FEATURE	MEGA-M250S DESCRIPTION	MEGA-T250S DESCRIPTION
Cut-off blade size	10-inch (~250 mm)	10-inch (~250 mm)
Arbor size	32 mm	32 mm
Cutting capacity (H X D)	Maximum 2 x 4-inch (50 x 100 mm)	Maximum 2 x 8-inch (50 x 200 mm)
Cutting capacity	Maximum diameter 2.5-inch (65 mm)	Maximum diameter 3-inch (75 mm)
Wheel feed	Manual	Manual
Table feed	n.a.	Manual
Y pulse feed	n.a.	Manual
Y constant feed	n.a.	Manual
Vertical movement (z-axis)	3.25-inch (82 mm)	3.9-inch (100 mm)
Table feed movement (y-axis)	n.a.	3.3-inch (84 mm)
Table movement (x-axis) for parallel cuts	n.a.	n.a.
T-slotted table dimensions	9.75 x 9-inch (250 x 230 mm)	11 x 18.25-inch (280 x 470 mm)
T-slotted width	0.5-inch (50 mm)	0.5-inch (50 mm)
Operation	Manual	Manual
Cooling unit	14 gallons (53 liters)	14 gallons (53 liters)
Motor power	Asynchronous 3 phase motor speed - 2.2 KW/(3 hp)	Constant torque variable speed servo motor - 4.5 KW/(5.8 hp)
Motor speed	Variable (1000-3000 rpm)	Variable (1500-3500 rpm)
Electrical specification	220V single phase 380V or 480V, 3φ (50/60 Hz)	208Y / 380V or 480V, 3φ (50/60 Hz)
Cutting force (current settings)	15 amps (max)	3-15 amps (Adjustable)
Dimensions (WxDxH)	Hood closed: 29.5 x 27 x 28-inch (750 x 685 x 720 mm) Hood open: 29.5 x 27 x 39-inch (750 x 685 x 990 mm)	Hood closed: 35.5 x 32 x 28-inch (900 x 815 x 710 mm) Hood open: 35.5 x 32 x 39-inch (900 x 815 x 990 mm)
Weight	240 lbs (110 kg)	375 lbs (170 kg)
Cutter Support Bench (optional)	MEGA-T2-BENCH	MEGA-T2-BENCH
Catalog Number	MEGA-M250S	MEGA-T250S

Benefits:

- ◆ Non-touch screen control
- ◆ Wheel and table feed controlled cutting
- ◆ Cutting capacity up to 3-inches (75 mm) solid stock sample using 10-inch (250 mm) blade
- ◆ Variable speed control
- ◆ High leverage handle for better control
- ◆ Variable speed motors
- ◆ Twin t-slotted stainless steel table
- ◆ Electronic braking system

Universal Vertical Vise

Universal Vertical clamping vise with 65 and extended 95 mm arm (2.5/3.75-inch) and shoe
Catalog no. MG-E

Universal Vertical Height Adapter Block

57 mm (2.25-inch) height adapter for vertical clamping vise
Catalog no. MG-EH

Recommended Cutting Procedures:

- Select the appropriate abrasive blade (abrasive type, bond, hardness, material properties, cutter speed)
- Secure specimen. Improper clamping may result in blade and/or specimen damage
- Check coolant level and replace when low or excessively dirty
- Adjust the abrasive cutter speed to optimize the cutting process. Typically softer metals are cut at slower speeds to reduce the cutting burr or smearing of the metal. Harder samples are cut at medium to high speeds in order to break down the wheel bond in order to expose new / sharp abrasives.
- Allow the abrasive blade to reach its operating speed before beginning the cut
- A steady force or light pulsing action will produce the best cuts and minimize blade wear characteristics, as well as maintain sample integrity (no burning)
- When sectioning materials with coatings, orient the specimen so that the blade is cutting into the coating and exiting out of the base material, thereby keeping the coating in compression

ABRASIVE CUTTING CONSUMABLES

Abrasive Cutting Fluid Recommendations

CUTTING FLUID	APPLICATION	RECOMMENDED DILUTION	CHANGING FREQUENCY
MAXCUT cutting fluid	As a replacement for competitors cutting fluids	25:1 (water)	50 cuts or weekly
MAXCUT2 cutting fluid	Recommended for reducing corrosion in cutting chamber	25:1 (water)	50 cuts or weekly

Tips: Abrasive Cutter Care:

- ◆ Use clean/fresh MAXCUT2 cutting fluid; fluid should be changed weekly
- ◆ Rinse and dry table and vises after use
- ◆ When cutter is not in use open hood to prevent humidity build-up
- ◆ If cutter will not be used for an extended period of time, spray table and vises with a water displacement oil such as WD40®

Abrasive Cutting Fluids

PACE Product Name	Catalog Number	Qty	Price (\$)
MAXCUT Abrasive Cutting Fluid (32 oz)	MAXCUT-1000-32	32 oz	39.50

ABRASIVE CUTTING RECOMMENDATIONS

APPLICATION	ADVANTAGE	DISADVANTAGE	BLADE COMPOSITION	RECOMMENDED BLADE
General cutting with universal thin resin / rubber bonded blades	Thin durable longer lasting blade for cutting most materials.	Rubber bonded blades can produce a burning rubber smell	Alumina resin-rubber bonded	MAX-A 
Hard non-ferrous metals (titanium, zirconium, etc.)	SiC abrasives are much more effective in cutting non-ferrous metals	Rubber bonded blades can produce a burning rubber smell	SiC / resin-rubber bonded	MAX-C 
General purpose blade for steels and ferrous metals	Resin bonded blades break down easily to expose fresh abrasives for cleaner cuts	Generally thicker blades with shorter working life	Alumina / resin bonded	MAX-D 
Soft non-ferrous metals (aluminum, brass, zinc, etc.)	Resin bonded blades break down easily to expose fresh abrasives for cleaner cuts	Generally thicker blades with shorter working life	Alumina / resin bonded	MAX-E 
Industrial general purpose reinforced blade	Lower cost, longer life resin bonded blades	Harder resin bond which may result in damaging or burning of the sample during aggressive cutting	Alumina / resin-bonded	MAX-I 
Heat treated and hardened steels	Specifically designed metallographic abrasive blades to reduce heat damage during sectioning	Resin bonded blades break down faster and therefore have shorter cutting life	Alumina / resin bonded	MAX-VHS 
Non-metallic materials such as glass, minerals, ceramics and composites	Diamond Blades do not wear down like ceramic abrasives blades	Relatively more expensive	Diamond	DMAX 

Abrasive Blade Maximum Operating Speed (M.O.S.) (rpm)

MAX-D	4580	3820	3275	3800
MAX-E	4500	3800	3200	3800
MAX-I	4500	3800	3200	3800
MAX-VHS	3055	2550	2200	1925
DMAX	6100	5000	4350	3800

TIP: Abrasive Cutting

- ◆ Properly fixture or clamp the sample/specimen
- ◆ Select the proper abrasive blade
- ◆ Set the correct cutting speed
- ◆ Use appropriate cutting fluid and direct the flow to the cutting zone
- ◆ Cut specimen while monitoring motor amperage. The correct blade will minimize the current draw on the motor
- ◆ After completion of the cutting operation, clean and dry the cutter fixtures, table and cutting chamber
- ◆ When not in use clean/dry and leave the hood in the open position to prevent corrosion. The use of a water displacement oil cutting fluids will also help prevent corrosion

Limited Warranty

FEATURE	PICO-155S DESCRIPTION	PICO-155P DESCRIPTION
Control	5-inch touchscreen with Digital LED display	Analog Buttons and Speed Control
Cutting capacity	Max. diameter 2-inch (50 mm)	Max. diameter 2-inch (50 mm)
Coolant	Dual nozzle with pump	Dual nozzle with pump
Table feed	3-inch (75 mm) - 7-inch (175 mm)	3-inch (75 mm) - 7-inch (175 mm)
Arbor size	0.5-inch (12.7 mm)	0.5-inch (12.7 mm)
Variable Speed (rpm)	200-1500 rpm continuously adjustable with digital speed display	200-1500 rpm continuously adjustable with LED speed display
Cutting Load	0-1500 gram load	0-1500 gram load
Micrometer feed distance	0 to 1-inch (0-25 mm)	0 to 1-inch (0-25 mm)
Micrometer accuracy	2 microns	2 microns
Electrical Specification	110V/220V (50/60 Hz) (single phase)	110V/220V (50/60 Hz) (single phase)
Motor power	125W (24V)	125W (24V)
Dimensions (WxDxH)	19 x 23 x 14-inch (48 x 58 x 37 cm) (hood closed) 19 x 29 x 19-inch (48 x 74 x 37 cm) (hood open)	19 x 23 x 14-inch (48 x 58 x 37 cm) (hood closed) 19 x 29 x 19-inch (48 x 74 x 37 cm) (hood open)
Weight	66 lbs (30 kg)	66 lbs (30 kg)
Catalog Number	PICO-155S	PICO-155P

Benefits:

- ◆ Microprocessor controlled (PICO-155S)
- ◆ 200-1500 rpm speeds
- ◆ Accepts 3-7 inch (75-175 mm) wafering blades
- ◆ Built-in digital micrometer
- ◆ Counter balanced loading
- ◆ Sliding weight gravity feed loading up to 1500 grams
- ◆ Built-in coolant system with internal pump
- ◆ Magnetic safety switch
- ◆ Emergency stop switch
- ◆ Optional cutting table attachment

Variable Speed Metallographic Table Saw

2 year warranty
Limited Warranty

FEATURE	PICO-200 DESCRIPTION
Cut-off blade size	Max. diameter 8-inch (200 mm)
Cutting capacity	1.5-inches (38 mm)
Specimen feed	Table feed
Coolant tank	3 Liters
Arbor size	0.5-inch
Variable Speed (rpm)	300-3000 rpm continuously adjustable with LED speed display
Motor power	0.5 hp (400 W)
Electrical Specification	110V/220V (50/60 Hz) (single phase)
Dimensions (WxDxH)	18 x 20 x 14-inch (46 cm x 50 cm x 35 cm)
Weight	85 lbs (38 kg)
Catalog Number	PICO-200

Benefits:

- ◆ Variable cutting wheel speeds from 300-3000 rpm
- ◆ Hard anodized working table
- ◆ Dry or wet cutting
- ◆ T-slot clamping vises for mounting versatility

PRECISION SECTIONING

PICO-155P/155S Accessories

32 mm Circular Vise

Sample holder for small round and mounted specimens (1.25-inch / 32 mm)
Catalog no. P150-707

40 mm Circular Vise

Sample holder for large round and mounted specimens (1.5-inch / 40 mm)
Catalog no. P150-708

Teardrop Vise

Specimen teardrop holder for 0.6-1.6-inch (18-40 mm)
Catalog no. P150-710

Irregular Sample Vise

Sample vise for irregular shaped samples
Catalog no. P150-706

Single Saddle Vise

Universal specimen vise (single saddle)
Catalog no. P150-702

Double Saddle Vise

Sample holder with double parallel vise for long specimens (double saddle)
Catalog no. P150-703

Large Universal Vise

Large single saddle vise with support lip
Catalog no. P150-702b

Adhering Vise

Specimen vise for adhering or gluing samples
Catalog no. P150-709

Fastener Vise

Fastener vise for longitudinal sectioning of fasteners, tubes, etc.
Catalog no. P150-711

Dressing Fixture

Dressing stone attachment
Catalog no. P150-701

Cutting Table

Cutting table attachment for manual cutting of flat specimens and PCB's
Catalog no. P150-601

50 mm Flanges

50 mm diameter arbor flanges
Catalog no. P155-M-002

75 mm Flanges

75 mm diameter arbor flanges
Catalog no. P155-M-003

100 mm Flanges

100 mm diameter arbor flanges
Catalog no. P155-M-100

1x3-inch Glass Slide

Vacuum glass slide holder for 1x3-inch petrographic slides
Catalog no. P155-GHL

27x46 mm Glass Slide

Vacuum glass slide holder for 27x46 mm petrographic slides
Catalog no. P155-GHS

Sample Support Arm

Sample support arm with multiple specimen vise positioning locations
Catalog no. P150-407

Swivel Support Arm

Sample support arm with swivel for angular cutting
Catalog no. P150-713

Weight Stack

Stainless steel weight stack components:
 Counter balance rod **Catalog no. P150-411**
 Counter balance weight **Catalog no. P150-410**
 250 gram weight **Catalog no. P155-M-012**
 300 gram weight **Catalog no. P155-M-013**

General Purpose		Variable	Variable	Medium/High

Boron-graphite composite sectioned with fine grit diamond wafering blade. Boron fibers damage minimal

Silicon edge intact after sectioning with fine grit diamond wafering blade

Boron-graphite composite sectioned with medium grit diamond wafering blade. Boron fibers damaged

Silicon edge damaged after sectioning with medium grit diamond wafering blade

TIP: Precision Wafering

1. Properly fixture or clamp the sample/specimen
2. Select the proper wafering blade and cutting fluid
3. Set the blade speed and load
4. For samples with coatings orient the sample so the coating is cut in compression
5. Dress or condition the blade periodically when the cutting rate diminishes

7-inch stainless steel high concentration diamond Wafering Blade	WB-007HCS	each	375.00
8-inch stainless steel high concentration diamond Wafering Blade	WB-008HCS	each	435.00

Improved Precision Wafering Blades:

- ◆ Stainless steel core for improved corrosion resistance
- ◆ Economical Option
- ◆ High Quality Blade
- ◆ Available with a general purpose diamond / CBN hybrid abrasive and with the traditional low and high medium grit diamond concentration

COMPRESSION MOUNTING

TERAPRESS TP-7100S MOUNTING PRESS

TERAPRESS TP-7100S

TERAPRESS TP-7100S

Pneumatic Compression Mounting Press

- Pneumatic (air pressure) press
- Automatic
- Programmable
- 1000 & 2000 Watt heaters
- Water cooling (temperature, time and manual)
- Non-Interchangeable molds or Interchangeable mold cylinder (optional)
- Mold sizes (1, 1.25, 1.5 and 2-inch / 25, 30 and 40 mm)
- High resolution display
- Highly reproducible mounts
- Robust and durable design
- Economical

TERAPRESS TP-7500S MOUNTING PRESS

TERAPRESS TP-7500S

TERAPRESS TP-7500S

Hydraulic Compression Mounting Press

- Hydraulic force
- Automatic
- Programmable
- 1000 & 2000 Watt heaters
- Water cooling (temperature, time and manual)
- Non-Interchangeable molds or Interchangeable mold cylinder (optional)
- Mold sizes (1, 1.25, 1.5 and 2-inch / 25, 30 and 40 mm)
- High resolution display
- Highly reproducible mounts
- Robust and durable design
- Economical

WTP-TANK Coolant System

TP-TANK

TERAPRESS TP-TANK

Variable Speed Table Saw

- Eco-friendly recirculating tank
- Colling heat exchanger with programmable thermostat
- 24V pump (connected to 110V power supply)
- 1.3 GPM maximum flow
- Easy to operate
- Economical

COMPRESSION MOUNTING PRESSES

Pneumatic Metallographic Compression Mounting Press

2 year warranty
Limited Warranty

FEATURE	TERAPRESS TP-7100S DESCRIPTION
Control	Touch screen
Mount sizes	1, 1.25, 1.5 and 2-inch (25, 30 and 40 mm)
Mold Cylinders	Single
Force	Pneumatic force
Incoming Pressure	Max. 95 psi
Heater Specification	1000 Watts (110V 15 amp), 2000 Watts (220V 10 amp)
Maximum Temperature	392°F (200°C)
Cooling System	Water with manual, temperature or time control
Dimensions (WxDxH)	21 x 19 x 19-inches (530 x 48 x 48 mm)
Weight	69 lbs (32 kg)
TP-TANK	Recirculating / Cooling Tank (14 gallon) with pump (optional)
Catalog Number	TP-7100S-110V & TP-7100S-220V

Benefits:

- ◆ Fast cycle times
- ◆ Interchangeable or fixed size molds
- ◆ 7-inch touchscreen
- ◆ Soft Start capabilities
- ◆ Custom procedures list
- ◆ Heating graph for monitoring temperature and cycle progress

Hydraulic Metallographic Compression Mounting Press

FEATURE	TERAPRESS TP-7500S DESCRIPTION
Control	Touch screen
Mount sizes	1, 1.25, 1.5 and 2-inch (25, 30 and 40 mm)
Mold Cylinders	Single
Force	Hydraulic force
Maximum Force	32 MPa (4500 psi)
Heater Specification	1000 Watts (110V 15 amp), 2000 Watts (220V 10 amp)
Maximum Temperature	392°F (200°C)
Cooling System	Water with manual, temperature or time control
Dimensions (WxDxH)	21 x 19 x 19-inches (530 x 480 x 480 mm)
Weight	108 lbs (50 kg)
TP-TANK	Recirculating / Cooling Tank (14 gallon) with pump (optional)
Catalog Number	TP-7500S-110V & TP-7500S-220V

Benefits:

- ◆ Fast cycle times
- ◆ Hydraulic
- ◆ Interchangeable or fixed size molds
- ◆ Up to 32 MPa pressure at the mount
- ◆ Soft start capabilities
- ◆ Quiet operation
- ◆ 7-inch touchscreen
- ◆ Custom procedures list
- ◆ Heating graph for monitoring temperature and cycle progress

Recirculating / Coolant System

FEATURE	TP-TANK DESCRIPTION
Cooling	Programmable
Pump	24VDC, 75W Diaphragm Pump, 0.86 GPM (3.25L/ minute)
Dimensions (W x D x H)	16 x 28 x 26-inch (410 x 710 x 660 mm)
Electrical specification	110 / 240V (50/60 Hz)
Tank Volume	14 gallons (53 L)
Weight	28 lbs (13 kg)

Benefits:

- ◆ Environmentally smart
- ◆ Allows for TP-7500S to be mobile
- ◆ More controlled cooling temperature

Machinery Directive 2006/42/EC
2014/35/ EU Low Voltage Directive
2014/30/EU Electromagnetic Compatibility Directive

COMPRESSION MOUNTING

TERAPRESS Mold Assemblies

1-inch Mold Assembly

1.0-inch interchangeable mold assembly contains mold sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-0100

1.25-inch Mold Assembly

1.25-inch interchangeable mold assembly contains mold sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-0125

1.5-inch Mold Assembly

1.5-inch interchangeable mold assembly contains mold sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-0150

25 mm Mold Assembly

25 mm interchangeable mold assembly contains sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-25

30 mm Mold Assembly

30 mm interchangeable mold assembly contains sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-30

40 mm Mold Assembly

40 mm interchangeable mold assembly contains sleeve, lower/upper ram (spacer optional)
Catalog no. TP75-40

Interchangeable Molds:

- ◆ Allows for easy changing of mold size. Simply replace mold, sleeve and rams
- ◆ Available in 1, 1.25 and 1.5-inch as well as 25, 30 and 40 mm molds

Fixed Block Molds:

- ◆ The heater/cooler is manufactured to match the size of the mold (does not require a mold sleeve)
- ◆ Reduces cooling times for producing faster mounts
- ◆ Available in 1, 1.25, 1.5 and 2-inch as well as 25, 30, 40 and 50 mm sizes

Green Phenolic powder (5 lbs)	CM-2001G-5	5 lbs	30.00
Green Phenolic powder (25 lbs)	CM-2001G-25	25 lbs	135.00

TIP: Phenolic Colors

Use different phenolic colors to code jobs, specimen types or for different test dates. For example, changing the phenolic color each month will show which samples or jobs are getting old

If the color dye in the mount bleeds out when rinsing with alcohol, this is an indication that the mount was not fully cured either at a high enough temperature or for the proper length of time

Phenolic PREMIUM Compression Mounting with Mold Release Agent

PREMIUM Phenolic Powders

PACE Product Name	Catalog Number	Qty	Price (\$)
Black PREMIUM Phenolic powder (2.5 kg)	CM-2500B-2	2.5 kg	38.00
Black PREMIUM Phenolic powder (7.5 kg)	CM-2500B-8	7.5 kg	155.00

Green PREMIUM Phenolic powder (7.5 kg)	CM-2500G-8	7.5 kg	165.00

COMPRESSION MOUNTING CONSUMABLES

Acrylic Clear Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
TRANSACRYLIC clear compression mounting powder (5 lbs)	CM-2101A-5	5 lbs	115.00
TRANSACRYLIC clear compression mounting powder (25 lbs)	CM-2101A-25	25 lbs	505.00

TIP: Acrylic Mounts

A common problem with acrylic mounts, known as the "cotton ball" effect, can occur with thermoplastic acrylic resins. The cause is due to the following:

Heating the compression mounting resin too fast or to a temperature which causes a liquid layer to form around the non-melted powder. This creates trapped air that cannot escape. It is recommended for the high heating efficiency of PACE Technologies mounting presses, that the mounting press use a maximum curing temperature that does not to exceed 130°C. Note: All mounting presses provide a different rates of heating so results may vary from one manufacturer to another.

Acrylic PREMIUM Clear Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
TRANSACRYLIC clear compression mounting powder (1 kg)	CM-2101A-1	1 kg	52.50
TRANSACRYLIC clear compression mounting powder (2.5 kg)	CM-2101A-2	2.5 kg	125.00
TRANSACRYLIC clear compression mounting powder (7.5 kg)	CM-2101A-8	7.5 kg	365.00

Diallyl Phthalate Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
Diallyl Phthalate blue compression mounting powder (5 lbs)	DY-2301A-5	5 lbs	155.00
Diallyl Phthalate blue compression mounting powder (25 lbs)	DY-2301A-25	25 lbs	605.00

Glass Filled Epoxy Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
EPOCOMP Epoxy Resin powder (5 lbs)	EP-2201A-5	5 lbs	145.00
EPOCOMP Epoxy Resin powder (25 lbs)	EP-2201A-25	25 lbs	580.00
EPOCOMP Fine Epoxy Resin powder (5 lbs)	EPF-2201-5	5 lbs	155.00
EPOCOMP Fine Epoxy Resin powder (25 lbs)	EPF-2201-25	25 lbs	610.00

TIP: Glass Filled Mounts

- ◆ Glass filled epoxies and diallyl phthalates are excellent mounting compounds for protecting the specimen edges during grinding and polishing
- ◆ Glass filled resins can be expensive, so to reduce the cost per mount, it is recommended that the epoxy or diallyl phthalate be used at the specimen interface and then layered with a lower cost mounting compound such as a phenolic. A common combination is red phenolic / glass filled epoxy.

PREMIUM Glass Filled Epoxy-Phenolic Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
PREMIUM Glass Filled Epoxy-Phenolic edge retention compression mounting resin (2.5 kg)	EPF-2500-2	2.5 kg	195.00
PREMIUM Glass Filled Epoxy-Phenolic edge retention compression mounting resin (8 kg)	EPF-2500-8	7.5 kg	725.00

COMPRESSION MOUNTING CONSUMABLES

Conductive Compression Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
Conductive (graphite) powder (1 lb)	CONDUCTO-1P	1 lb	40.50
Conductive (graphite) powder (5 lbs)	CONDUCTO-5P	5 lbs	195.00
Conductive (graphite) powder (25 lbs)	CONDUCTO-25P	25 lbs	760.00

Compression Mounting Recommended Procedures:

- ◆ Clean specimens to remove cutting and handling residue
- ◆ Remove debris from mold assembly
- ◆ Apply thin coat of mold release compound to mold assembly
- ◆ Raise mold ram to up position
- ◆ Center specimen on ram
- ◆ Lower ram assembly
- ◆ Pour predetermined amount of resin into mold
- ◆ Lock mold assembly cover
- ◆ Slowly raise ram into up position
- ◆ Apply recommended heat and maintain force for specified period of time
- ◆ Cool to near room temperature
- ◆ Remove mounted specimen
- ◆ Clean mold and ram assembly

CASTABLE MOUNTING

VACUUM CHAMBER LSSA-011

Castable Vacuum Mounting Press

- Pour under vacuum
- Tilting, retractable pouring arm
- Cure at room pressure
- Easy to Use
- Robust and durable design
- Economical

ACRYLIC PLUS Acrylic	2-parts powder and 1-part liquid	Semi-clear, fast cure, lower cost
SUPERMOUNT Acrylic	3-parts powder and 2-parts liquid	Grayish/Black, hard, low shrinkage, fast cure
Epoxy - standard Epoxy PLUS	5:1 resin:hardener (wt.) 11:2 resin:hardener (wt.)	Clear to translucent, low shrinkage, 4-8 hour cure
Quick Mount Epoxy	Epoxy (2-liquids) 10:1 resin:hardener (wt.)	Translucent, slightly yellow, 30 minute - 2 hour cure
ULTRATHIN 2 Epoxy ULTRATHIN 2 Epoxy PLUS	10:1 resin:hardener (wt.) 18:5 resin:hardener (wt.)	Clear, low viscosity for porous specimens, 2-6 hour cure
POLYCAST Polyester	Polyester (2-liquids)	Clear and relatively inexpensive

CASTABLE MOUNTING CHAMBER

Castable Metallographic Vacuum Mounting Chamber

2 year warranty
Limited Warranty

FEATURE	LSSA-011 DESCRIPTION
Bell jar	Tilting, retractable pouring arm
Mount sizes	1, 1.25, 1.5 and 2-inch -- 25, 30, 40 and 50 mm
Vacuum	Vacuum pump (sold separately)
Dimensions (WxDxH)	12 x 12 x 12-inch (300 x 300 x 300 mm)
Weight	2.2 lbs (1 kg)
Catalog Number	LSSA-011

Benefits:

- ◆ Able to pull vacuum and pour under vacuum
- ◆ Pour multiple samples
- ◆ High visibility chamber
- ◆ Easy to Use
- ◆ Robust and Durable

DESCRIPTION	110V VACUUM PUMP	220V VACUUM PUMP
Flow Rate	2 CFM (48 liters / minutes)	2 CFM (48 liters / minutes)
Ultimate Vacuum	50 micron	50 micron
Power	0.35 hp	0.35 hp
Inlet Port	1/4" SAE and 1/2" ACME ports	1/4" SAE and 1/2" ACME ports
Dimensions (WxDxH)	5 x 12 x 9.6-inch (130 cm x 310 cm x 240 cm)	5 x 12 x 9.6-inch (130 cm x 310 cm x 240 cm)
Weight	13.7 lbs (6.2 kg)	13.7 lbs (6.2 kg)
Catalog Number	VAC-110	VAC-220

Castable Mounting:

Castable resins are monomer resins which utilize a catalyst or hardener for polymerization. Polymerization results in cross-linking of the polymer to form a relatively hard mount. Castable resins also have the advantage of simultaneously mounting multiple samples at one time for increased throughput. A number of resin systems are used for metallographic mounting, these include:

- ◆ Epoxy (2-part) liquid resins
- ◆ Acrylic (castable) resin powders with a liquid hardener
- ◆ Polyester (clear and can be used for large castings) 2-part liquid resin/hardener

Machinery Directive 2006/42/EC
2014/35/ EU Low Voltage Directive
2014/30/EU Electromagnetic Compatibility Directive

ACRYLIC MOUNTING CONSUMABLES

Acrylic Castable Mounting:

Castable acrylics are easy to use and are very robust. The main advantage of mounting with castable acrylics is the fast curing time. Depending upon the mixing ratio, castable acrylic mounts are typically ready to use within 8-15 minutes. Also unlike epoxy resins, the ratio of the various acrylic parts (powder to liquid) can be altered up to 25% with no adverse effects to the final properties of the mount. This is because both the liquid and powder are acrylics containing various additives and curing agents. By varying the ratio of the liquid to powder, the curing time and viscosity can be altered.

PACE Product Name	Catalog Number	Qty	Price (\$)
CASTAMOUNT Acrylic kit (1 lb resin with 12 oz liquid hardener)	AK-5000-K1	1 lb	65.00

CASTAMOUNT Acrylic powder (100 lbs)	AR-5000-P100	100 lbs	4050.00
CASTAMOUNT Acrylic Liquids			
CASTAMOUNT Acrylic hardener (12 oz)	AH-5000-H12	12 oz	28.50
CASTAMOUNT Acrylic hardener (32 oz)	AH-5000-H32	32 oz	48.50
CASTAMOUNT Acrylic hardener (1/2 gallon)	AH-5000-H64	1/2 gallon	72.50
CASTAMOUNT Acrylic hardener (1 gallon)	AH-5000-H128	1 gallon	115.00
CASTAMOUNT Acrylic hardener (5 gallon)	AH-5000-H640	5 gallon	505.00

TIP: Acrylics

Acrylics can be submerged into a water bath during curing. This reduces the exotherm heat and thus reduces the shrinkage of the mount at the specimen interface. A secondary advantage is that the water also absorbs the odor.

EPOXY MOUNTING CONSUMABLES

Epoxy Castable Mounting:

The most common and best performing castable resins are epoxy based. Epoxy resins are typically two-part liquid systems consisting of a resin and hardener. Mixing ratios vary depending upon the volume of the mixture or the mount size. Larger mounts require a ratio of less hardener to resin. The advantages of mounting with epoxy resins include:

- ◆ Low shrinkage
- ◆ Relatively clear
- ◆ Relatively low exotherm
- ◆ Excellent adhesion
- ◆ Excellent chemical resistance
- ◆ Good hardness
- ◆ Relatively inexpensive

Epoxy Curing Characteristics:

- ◆ Epoxy curing times are dependent upon a number of variables including:
 - ◆ Volume of mounting resin (larger mounts cure faster)
 - ◆ Thermal mass of specimen (larger specimens absorb heat and therefore require longer curing times)
 - ◆ Specimen material properties
 - ◆ Initial resin temperature (higher resin temperatures cure faster)
 - ◆ Ambient temperature (higher room temperatures cure faster)
 - ◆ Relative humidity and shelf life (absorption of water degrades resin and shortens shelf life)
- ◆ Mounting mold (plastic and rubber molds absorb heat differently)

Epoxy Standard Cure (5:2 Resin: Hardener) Castable Mounting

PACE Product Name	Catalog Number	Qty	Price (\$)
Standard Epoxy Resin			
Epoxy castable resin (32 oz)	EP-3000-32	32 oz	44.50
Epoxy castable resin (1-gallon)	EP-3000-128	1 gallon	132.00

ULTRATHIN 2 PLUS Low Viscosity Epoxy Hardeners			
Low Viscosity castable epoxy hardener (8 oz)	ULTRA-3000H-08P	8 oz	42.00
Low Viscosity castable epoxy hardener (32 oz)	ULTRA-3000H-32P	32 oz	128.00
Low Viscosity castable epoxy hardener (1 gallon)	ULTRA-3000H-128P	1 gallon	450.00

TIP: Epoxies

- ◆ Preheat resin and sample to 35°C (95°F) to expedite the initial heating process and for decreasing overall curing time

POLYESTER MOUNTING CONSUMABLES

Polyester Castable Mounting:

Polyesters are typically used when a very clear mount is required. Polyester resins are also useful for mounting parts for display. In this case, the part appears suspended in the plastic. The procedure for molding samples to be displayed is to first determine the mixing ratio of the resin to hardener (catalyst). This ratio is variable depending upon the mass of the casting. The table to the right for Polyester catalyst mixing ratio's is based on ambient and resin temperatures of 70°F

For larger volumes, the amount of hardener needs to be reduced significantly. The procedure for suspending the sample in the mount is to pour an initial layer and allow it to pot or gel (do not let it fully cure). The object or specimen is then placed on the "rubbery" polyester layer and another layer of the liquid polyester is poured. Multiple layers can be poured in this fashion if required.

Single Layer Casting (metallographic)		Multiple Layer Casting (display)	
Layer Thickness (inches)	Drops of catalyst per ounce of resin	Layer	Drops of catalyst per ounce of resin
1/8	15	1st layer	4-5
1/4	8	2nd layer	3-4
1/2	6	3rd layer	2-3
3/4	5	4th layer	1-2
1-1.5	4	5th layer or more	1

Polyester Characteristics:

- ◆ Very clear (water clear)
- ◆ High odor
- ◆ Best resin system for making large casting

Polyester Resin (Clear Castable Mounting)

PACE Product Name	Catalog Number	Qty	Price (\$)
Clear Polyester castable resin (1 gallon)	POLYCAST-128	1 gallon	125.00
Polyester Hardener (2 oz)	POLYHARD-02	2 oz	11.00
Polyester Color Dye Set (3 colors)	DYE-1000	3 colors	40.50

TIP: Polyesters

Polyesters can be submerged into a water bath during curing. This reduces the exotherm heat and thus reduces the shrinkage of the mount at the specimen interface. A secondary advantage is that the water also absorbs the odor.

CASTABLE MOLDS & ACCESSORIES

Castable Mounting Molds

METALLOGRAPHIC HAND GRINDERS

Manual Metallographic Hand Grinder

FEATURE	PENTA 5000A DESCRIPTION
Grinding stations	240, 360, 600, 800 and 1200 grit silicon carbide rolls
Roll sizes	3-7/16-inch width x 60 feet length with 1-inch core
Construction	<ul style="list-style-type: none"> • SMC molding and stainless steel • Hard coat anodized rollers and paper support plates
Cooling rinse system	Water
Dimensions (WxDxH)	22 x 24 x 9-inch (550 mm x 610 mm x 230 mm)
Weight	56 lbs (25 kg)
Catalog Number	PENTA-5000A

2 year warranty
Limited Warranty

Benefits:

- ◆ 5-grit grinding stations, including one for 800 (P2400) and 1200 (P4000) grit fine SiC abrasives
- ◆ Easy paper advance for maintaining sharp fresh abrasive
- ◆ Low maintenance
- ◆ Simple and easy to use
- ◆ Ideal for low and high volume labs

Planarizing Metallographic Belt Grinder

FEATURE	PENTA 7500S DESCRIPTION
Single belt	4 x 36-inch (102 x 914 mm)
Electrical Specification	110V / 220V 50/ 60 Hz
Motor power	550 W (0.75 hp)
Cooling / rinse system	Water
Construction	Heavy duty welded steel / fabricated metal / Stainless steel
Dimensions (WxDxH)	20 x 25 x 15-inch (510 x 630 x 380 mm)
Weight	120 lbs (53 kg)
Catalog Number	PENTA-7500S

REQUEST A QUOTE

Benefits:

- ◆ High torque motor (110V or 220V)
- ◆ Heat treated wear surface plate
- ◆ Quick belt changing mechanism
- ◆ Fine adjustment tracking control
- ◆ Specimen square holding device for maintaining or for squaring mounted specimens
- ◆ Rinse sink
- ◆ Emergency Stop button
- ◆ Water-tight ON/OFF switch

ABRASIVE BELTS, POWDERS & ROLLS

Specimen Planar Grinding:

In general, it is better to cut as close to the areas to be investigated than to grind with very coarse abrasives such as 60, 80 and 120 grit grinding papers; however, if the specimen requires coarse abrasive grinding it is HIGHLY recommended that a belt grinder with a planar grinding / squaring fixture be used. The squaring fixture is important so that mounted specimens remain both square and flat.

Note: It is nearly impossible to maintain a square sample by hand on a belt grinder. Square specimen mounts are very important for subsequent specimen preparation on automated single specimen preparation machines. PACE Technologies is the only metallographic equipment manufacturer that offers a planar grinding fixture for its PENTA 7500S belt grinder.

PENTA 7500S Metallographic Belt Grinder

Abrasive Belts (4-inch x 36-inch)

Zirconia (blue), Alumina (red) & Silicon Carbide (black) Abrasive Grinding Belts

PACE Product Name	Catalog Number	Qty	Price (\$)
60 grit Zirconia Abrasive Belts	ZRO2-B060	5/pkg	80.00
120 grit Zirconia Abrasive Belts	ZRO2-B120	5/pkg	80.00

240 grit SiC Abrasive Belts	SIC-B240	10/pkg	125.00

ABRASIVE BELT TYPE

BENEFIT

Alumina

Hard and durable abrasive, not as sharp as SiC; however, alumina lasts longer than SiC

Silicon Carbide

Very hard and friable. Fast initial cutting, however SiC abrasive breaks down very fast so it is a "short-lived" abrasive

Zirconia

Very durable and hard abrasive. It is a longer lasting abrasive and is an excellent choice for belt grinders. The only drawback is that it requires higher grinding forces as compared to SiC and alumina abrasives

PENTA 5000A Metallographic Hand Grinder

Silicon Carbide (SiC) Abrasive Powders

SiC Abrasive Powders

1200 grit (P4000-grit) SiC Powder (5 lbs)	SIC-1200-P5	5 lbs	145.00

Silicon Carbide Powders:

- ◆ The main application for grinding with silicon carbide particles is in conjunction with flat lapping on hard metal plates such as cast iron. For metallographic specimen preparation, silicon carbide powders are used for grinding petrographic thin section specimens.

- 1.3 hp (1000W) motor (100-1000 rpm)
- Three programmable preset speeds and times for quick speed or time changes
- Easy to use control panel
- Auto timer control
- User friendly, robust and durable

NANO-1200S

12-inch Working Wheel

Anodized 12-inch working wheel for NANO-1200S polishers
Catalog no. PW-1200A

14-inch Working Wheel

Anodized 14-inch working wheel for NANO-1200S polishers
Catalog no. PW-1400A

NANO-1200S Splash Guard

Splash Guard for NANO-1200S Polisher
Catalog no. PTM-225-207

12-inch Paper Ring

12-inch Paper ring for plain-backed papers
Catalog no. PTM-225-005 (12-inch)

14-inch Paper Ring

14-inch Paper ring for plain-backed papers
Catalog no. PTM-225-006 (14-inch)

SiC particles in a Si₃N₄ matrix , 1000X (DIC)

AlN substrate with a molybdenum/ nickel, gold coating
400X (B.F.)

12 & 14-inch Metallographic Polishers

2 year warranty
Limited Warranty

FEATURE	NANO-1200S DESCRIPTION
Motor power	1.3 hp (1000 W)
Power head upgrade	FEMTO-2200S / FEMTO-2500S
Polishing wheels	Single - 12 & 14-inch diameter
Electrical specification	110 or 220V (50/60 Hz) pre wired at factory
Speed (rpm)	Variable (100 - 1000 rpm) - Grinding (600-1000 rpm) - Polishing (100-600 rpm)
Anodized Working wheels: 12-inch 14-inch	Part no. PW-1200A Part no. PW-1400A
Dimensions (W x D x H)	20 x 16 x 25-inch (510 x 420 x 640 mm)
Weight	95 lbs (43 kg)
Catalog Number	NANO-1200S
Optional	Recirculating filtering tank (RC-1000A)

NANO-1200S 12 & 14-inch Polisher Accessories	Catalog Number
12-inch diameter hard coat anodized aluminum working wheel	PW-1200A
14-inch diameter hard coat anodized aluminum working wheel	PW-1400A
12 & 14-inch splash guard	PTM-225-207
12-inch 304 stainless steel plain-backed grinding paper ring	PTM-225-005
14-inch plastic plain-backed grinding paper ring	PTM-225-006

Benefits:

- ◆ Variable speed 100-1000 rpm
- ◆ CCW and CW direction control
- ◆ Rapid programmable speed and time selection
- ◆ Timer (count down to zero and turns off) range from 1 second up to 99 minutes and 60 seconds
- ◆ Emergency stop switch
- ◆ Swinging water spout
- ◆ 1.3 hp (1000W) motor
- ◆ Splash guard
- ◆ Electrical connections for FEMTO-2200S/2500S auto polishing

ANCILLARY POLISHING SYSTEMS

ZETA-2000S ABRASIVE DISPENSER / RC-1000A RECIRCULATING FILTER SYSTEM

NEW

ZETA-2000S

Abrasive and Lubricant Dispenser

- 4 (24v) dedicated, programmable peristaltic pumps.
- Setting adjustments for frequency, duration, start time, total time
- 7-inch touchscreen interface
- Compatible with NANO polishing machines as well as competitors' polishing devices
- Controlled priming for each pump and dispensing lines for more immediate application of the abrasive / lubricant
- Flushing/ priming sequence for changing of abrasive/lubricant options
- Variable flow 1.2~90 ml/minute
- Flex line for easy adjustment of dispensing nozzles
- 110/220V compatible
- Easy to use, robust and durable

RC-1000A

RC-1000A

Recirculating / Filter System

- Series of three replaceable filters (0.2, 0.5 and 1 micron)
- Positive pressure 24V pump (40W) (connected to 110V/220V power supply)
- 1.3 GPM (5 liters/min) maximum flow
- Easy to operate

ZETA-2000S Metallographic Abrasive Dispenser

FEATURE	ZETA-2000S DESCRIPTION
Pumps	4 (24v) dedicated, programmable peristaltic pumps Setting adjustments for: - Frequency - Duration - Start time - Total time
Flow rates	1.2 - 90 ml/minute
Cleaning	Water flushing
Electrical specification	110 / 220V (50/60 Hz)
Dimensions (W x D x H)	9.5 x 11 x 12-inch (240 x 70 x 300 mm)
Weight	20 lbs (9.1 kg)
Catalog Number	ZETA-2000S

2 year warranty
Limited Warranty

Benefits:

- ◆ Microprocessor controlled
- ◆ Can be used manually on competitors' equipment
- ◆ Interfaces with the FEMTO-S Auto Polishing heads for automated abrasive fluid dispensing
- ◆ Capable of dispensing NANOMETER alumina and SIAMAT colloidal silica and subsequently back flushing the lines to keep them clean and reusable

RC-1000A Recirculating / Filter System

FEATURE	RC-1000A DESCRIPTION
Filtering	Coarse (2-straining filters) Fine Filters (0.2, 0.5 and 1 µm)
Tank capacity	14 gallons (53 L)
Pump	24VDC Diaphragm Pump (1.3 GPM, 5 liters/min)
Electrical specification	110 / 220V (50/60 Hz)
Pressure	60 psi (0.42 MPa)
Dimensions (W x D x H)	32 x 16 x 20-inch (800 x 420 x 500 mm)
Weight	30 lbs (14 kg)
Catalog Number	RC-1000A

2 year warranty
Limited Warranty

Benefits:

- ◆ Eliminates need for water and sewer hook-up
- ◆ Allows the polishing machine to be mobile
- ◆ Environmentally friendly
- ◆ Self-contained system

FEMTO 1500S Automated Metallographic Polishers

FEATURE	NANO-1000S / FEMTO-1500S DESCRIPTION	NANO-2000S / FEMTO-1500S DESCRIPTION
Polishing Wheels	8 & 10-inch single wheel	8 & 10-inch double wheel
Force application	Individual pistons (1-6 samples) Central force (3-6 samples)	Individual pistons (1-6 samples) Central force (3-6 samples)
Sample Holder	Quick release chuck	Quick release chuck
Motor power (FEMTO)	0.5 hp (400 W) dynamic torque servo motor	0.5 hp (400 W) dynamic torque servo motor
Motor power (NANO)	1 hp (750 W) dynamic torque servo motor	1 hp (750 W) dynamic torque servo motor
Electrical specification	110 / 220V (50/60 Hz)	110 / 220V (50/60 Hz)
Speed (rpm)	0-300 rpm	0-300 rpm
Relative Head:Base Direction	Complementary and Contra	Complementary and Contra
Dimensions (W x D x H)	16 x 21 x 26-inch (410 x 530 x 670 mm)	29 x 22 x 26-inch (750 x 560 x 670 mm)
Weight	128 lbs (58.2 kg) with polisher base	185 lbs (84 kg) with polisher base
Optional	ZETA-2000S abrasive dispenser	ZETA-2000S abrasive dispenser
Optional	RC-1000A filter/recirculating tank	RC-1000A filter/recirculating tank

2 year warranty
Limited Warranty

Benefits:

- ◆ Central and Individual polishing force
- ◆ Produces flatter specimens with central force, especially useful for specimens having materials of different hardness (e.g. thermal spray coatings, electronic components, heat treated steels, etc.)
- ◆ Individual force procedures require fewer initial grinding steps and the samples can be removed and reinserted with the need to planarize
- ◆ Specimens can be polished in both the contra and complementary head / base directions

AUTOMATED METALLOGRAPHIC POLISHERS

NEW

FEMTO-2200S/2500S

NANO-1200S/FEMTO-2200S

Autopolishing Head for Larger Working Areas

- FEMTO-2500S is a dual Individual and Central force specimen polishing head
- FEMTO-2200S is an Individual force polishing head
- Compatible with the NANO-1200S polisher
- 0-300 rpm Variable Speed Head
- Contra or Complementary Direction
- User friendly / Easy to Use
- Robust and Durable

Individual vs. Central Force Automated Polishing

APPLICATION	ADVANTAGES	DISADVANTAGES
Individual Force	<p>Reduced number of preparation steps and lowers cost for consumables</p> <p>Sample can be re-polished without having to planarize specimens in the holder</p>	<p>Can result in loss of flatness across the specimen if heavy duty coarse grinding is required</p> <p>It is recommended that the grinding and polishing steps only be done at matching head and base speeds with the rotation being in the same direction</p>
Central Force	<p>Flatter specimens</p> <p>Specimens can be polished in both the contra and complementary head / base directions</p>	<p>Minimum of 3-samples are required in the holder</p> <p>Typically requires 1-3 additional coarser grinding steps to planarize all specimens</p> <p>Additional grinding steps increase both consumables cost and total preparation time</p> <p>Coarser grinding can result in more surface and subsurface damage to the specimen</p> <p>Need to planarize specimens again if they are removed from the fixed holder</p>

FEATURE	GIGA-S DESCRIPTION
Polishing Bowl size	9 or 12-inch
Drive Mechanism	PZT Motor
Electrical specification	110 / 220V (50/60 Hz)
Construction	Aluminum casting with SMC cover (injection molded)
Frequency	0~220Hz
Motor voltage	200V (600 W)
Dimensions (W x D x H) (note: hood can also be removed)	Hood closed: 16 x 20 x 16-inch (420 x 500 x 410 mm) Hood open: 16 x 20 x 30-inch (420 x 500 x 750 mm)
Weight	135 lbs (62 kg)

Benefits:

- ◆ Superior surface finishes
- ◆ Eliminates subsurface damage (has been shown to produce the best surface finish for EBSD sample preparation)
- ◆ Able to polish multiple samples simultaneously
- ◆ With correct CMP polishing abrasive, flatter or more planar finishes can be obtained over materials having a wide range of hardness'

GRINDING CONSUMABLES

Silicon Carbide Abrasives:

SiC is a manufactured abrasive produced by a high temperature reaction between silica and carbon. It has a hexagonal-rhombohedral crystal structure and a hardness of approximately 2500 HV. It is an ideal abrasive for cutting and grinding metallographic specimens because of its high hardness and sharp edges. It is also somewhat brittle, and therefore it cleaves easily to produce sharp new edges (self sharpening). SiC is an excellent abrasive for maximizing cutting rates while minimizing surface and subsurface damage. For metallographic preparation, SiC abrasives are used in abrasive blades and for coated abrasive grinding papers ranging from very coarse 60 grit to very fine 1200 (P4000) grit sizes.

Bonded or coated abrasive papers of SiC are designed so that the abrasive will have a large number of cutting points (negative abrasive rank angle). This is achieved by aligning the abrasive particles approximately normal to the backing. Note that coated abrasives are not quite coplanar, thus SiC papers produce the maximum efficiency (cut rate, stock removal and minimal damage) because new abrasive is exposed as the old abrasive breaks down.

SiC Grinding Characteristics:

- Easy to use
- Repeatable
- Relatively lower cost to other options
- Available with and without a pressure sensitive adhesive (PSA) backing

Abrasive Grinding

Process Description

The machining parameters which affect the preparation of metallographic specimens include: grinding/polishing pressure, relative velocity distribution and the direction of grinding/polishing.

Preston's Equation has been used to describe the mechanical contributions of pressure and velocity to removal rates. Preston's Equation states that the removal rate is proportional to the velocity times the pressure.

Preston's Equation $R = kPV$

R= material removal rate

k= Preston coefficient

P= normal lapping force

V= relative tangential velocity between the lapping plate and work piece

Grinding Pressure

Grinding and polishing pressure is dependent upon the applied force (pounds or Newtons) and the area of the specimen and mounting material. Pressure is defined as the Force/Area (psi, N/m² or Pa). For specimens significantly harder than the mounting compound, pressure is better defined as the force divided by the specimen surface area. Thus, for larger hard specimens higher grinding/polishing pressures increase stock removal rates, however higher pressure also increases the amount of surface and subsurface damage. Note for SiC grinding papers, as the abrasive grains dull and cut rates decrease, increasing grinding pressures can extend the life of the SiC paper.

Higher grinding and polishing pressures can also generate additional frictional heat which may actually be beneficial for the chemical mechanical polishing (CMP) of ceramics, minerals and composites. Likewise for extremely friable specimens such as nodular cast iron, higher pressures and lower relative velocity distributions can aid in retaining inclusions and secondary phases.

Grinding Direction

The orientation of the specimen can have a significant impact on the preparation results, especially for specimens with coatings. In general, when grinding and polishing materials with coatings the brittle component should be kept in compression. In other words, for brittle coatings the direction of the abrasive should be through the coating and into the substrate. Conversely, for brittle substrates with ductile coatings, the direction of the abrasive should be through the brittle substrate into the ductile coating.

Proper alignment and machine conditions produce flat planar samples

Improper alignment and machine conditions produce MRD

Material Removal Differential (MRD)

The term MRD (material removal differential) has been used to describe the negative affect that occurs when the sample does not grind equally across the entire surface of the sample and to some extent the entire surface of the sample mount (see example).

A number of factors contribute the MRD, these include:

- Uneven wear on the abrasive paper, film or foil
- Mount does not track over the edge and/or center of the grinding paper
- Wide range in velocity distributions (contra direction)
- Large differences in hardness between the mount and the sample

MRD is typically more pronounced for SiC papers as the SiC abrasive is very hard and brittle and breaks down relatively fast.

To eliminate MRD:

- Align the sample holder on the FEMTO polishing head so that the sample tracks across the entire radius of the grinding paper.
- Rotate the FEMTO and NANO head at the same velocity and in the same direction.

10-inch SILICON CARBIDE ABRASIVE PAPERS

Silicon Carbide Converter:

PACE Technologies is an actual metallographic supplier that converts its own SiC papers, which provides better quality control, distribution and flexibility for supplying metallographic silicon carbide papers.

SiC Conversion Characteristics:

- ◆ PSA laminating
- ◆ Die cutting
- ◆ Relatively lower cost to produce
- ◆ Focus on metallographic vs. industrial graded products

10-inch SILICON CARBIDE ABRASIVE PAPERS

Grinding Relative Velocity

Current autopolishing grinding and polishing machines are designed with the specimens mounted in a disk holder and machined on a disk platen surface. This disk on disk rotation allows for a variable velocity distribution depending upon the head speed relative to the base speed.

NOTE: Matching the head and base speed, while running in the same direction produces better flatness and lower surface damage because this minimizes the velocity distribution across the sample as it rotates.

For high stock removal, a slower head speed relative to a higher base speed produces the most aggressive grinding and polishing operation. The drawback to high velocity distributions is that the abrasive (especially SiC papers) may not breakdown uniformly, this can result in non-uniform removal across the specimen surface. Another disadvantage is that the high velocity

distributions can create substantially more specimen damage, especially in brittle phases. In all cases, it is not recommended to have the head rotating contra direction to the base because of the non-uniform removal and abrasive break-down which occurs.

Minimal relative velocity distributions can be obtained by rotating the head specimen disk at the same rpm and same direction as the base platen. This condition is best for retaining inclusions and brittle phases as well as for obtaining a uniform finish across the entire specimen. The disadvantage to low relative velocity distributions is that stock removal rates can be quite low.

In practice, the best condition to run the polishing machine is by matching the head and base speeds at 200-300 rpm and in the same direction. For polishing it is recommended that the speed be reduce to 100/100 rpm base/head speed. For final polishing under chemical mechanical polishing (CMP) conditions where frictional heat can enhance the chemical process, high speeds and high relative velocity distributions can be useful as long as brittle phases are not present (e.g. monolithic ceramics such as silicon nitride and alumina).

High relative velocity distribution for non-matching head and base speeds.

Constant relative velocity distribution for-matching head and base speeds

Head Speed (rpm)	Base Speed (rpm)	Relative Velocity Distribution	Characteristic	Application
100-150	300-600	High	-Aggressive stock removal -Differential grinding across the specimen surface	Useful for gross removal on hard specimens
200-300	200-300	Low	-Matching head and base speed in the same direction eliminates relative velocity distributions -Uniform stock removal -Low stock removal -Produces minimal damage	-Provides superior flatness over the specimen -Useful for retaining inclusions and brittle phases

Catalog no. **SIC-600P12-100**

Abrasive Grinding Recommend Procedures Application (Fixed-abrasive Grinding)

- Start with the finest abrasive possible (typically 240 or 320 grit abrasive paper) Note: Only use coarser grit for very heavy stock removal
- Apply lubricant to abrasive surface
- Most commonly water
- Water soluble oils for water sensitive specimens
- Rinse specimens thoroughly before proceeding to the next finer abrasive

Grinding Surface Backing

Grinding papers come with different types of backing

- Plain-backed or non-adhesive backing
- PSA or pressure sensitive backing
- Foil or polyester plastic backing

Plain-backed papers are the least expensive, however, they require either a double sided adhesive or a paper holding ring. The disadvantage to using a paper holding ring is that the mounted specimen cannot track over the edge of the grinding paper. Thus the paper does not break down uniformly and thus can produce over grinding of the mount away from the sample. This artifact results in the polished mount exhibiting a crescent moon which can affect the edge of the specimen. This artifact has also been known as "mooning" or MRD (material removal differential).

PSA-backed or adhesive backed papers are removable grinding papers. They are more expensive than the plain-backed papers and the foil papers. They are very easy to use and avoid the problems with "mooning" and MRD if the sample tracks over both the center and edge of the grinding papers.

Foil-backed or polyester backed grinding papers are easy to use and are more economical than adhesive backed papers. The system uses a receiver adhesive disk that can be washed in order to extend its life.

Relative Position of the Auto Head to the Polishing Wheel

The FEMTO is equipped with an auto locating positioning feature. This feature ensures proper utilization and breakdown of grinding papers; it also extends the lifetime of polishing cloths. The FEMTO head is swung over the working wheel of the NANO polishing machine. Once dropped, it auto corrects and drops into the selected location. Auto positioning removes the non-repeatability of standard hand positioning of a polishing head.

Metallographic Sample Preparation

Metallographic CLASS Procedures Chart

Metallographic sample preparation can be broken down into specific preparation Classes based on the materials hardness and ductility.

SILICON CARBIDE FOIL SYSTEM

Grinding Foils (alternative to PSA backed papers):

As an alternative to PSA (pressure sensitive adhesive) backed silicon carbide papers, PACE Technologies offers a non PSA-backed abrasive grinding foil system. Grinding foils utilize a polyester film backing which attaches to a reusable / washable silicone adhesive receiver disk. The grinding foil system offers a lower cost alternative to PSA-backed grinding papers.

120 grit (105 micron) front / back side SiC foil

600 grit (15 micron) front / back side SiC foil

Silicone (adhesive) Receiver Disk with PSA backing

240 grit (63 micron) front / back side SiC foil

800 grit (6 micron) front / back side SiC foil

360 grit (30 micron) front / back side SiC foil

1200 grit (2 micron) front / back side SiC foil

SiC Foil Characteristics:

- ◆ Lower cost compared to PSA backed papers
- ◆ Reusable / Washable Silicone backing material
- ◆ Easy to use
- ◆ Compatible with competitors products

DIAMOND GRINDING

Diamond Grinding Disks:

Diamond grinding is most commonly used for grinding very hard brittle materials such as engineered ceramics. In practice, diamond grinding disks are also used to planar grind a wide range of other metals and minerals.

Diamond Bonding:

There are two types of bonding for diamond grinding disks: metal and resin. Metal bonded diamond grinding disks are more aggressive and can produce more damage. Resin bonded disks will break down easier to produce a better surface finish, however, they typically have lower life.

250 micron Metal Bonded Diamond Disk (20X close-up on left)

125 micron Resin Bonded Diamond Disk (10X close-up on left)

125 micron Metal Bonded Diamond Disk (20X close-up on left)

70 micron Resin Bonded Diamond Disk (10X close-up on left)

30 micron Metal Bonded Diamond Disk (20X close-up on left)

15 micron Resin Bonded Diamond Disk (10X close-up on left)

15 micron Metal Bonded Diamond Disk (20X close-up on left)

9 micron Resin Bonded Diamond Disk (10X close-up on left)

MAGNETIC BACKED DISKS

Diamond MD Grinding Disks:

As an alternative to PSA (pressure sensitive adhesives) diamond grinding disks, PACE Technologies offers magnetic backed (MD) abrasive diamond grinding disks. The magnetic diamond disks can be purchased pre-assembled on a magnetic stainless steel plate or the stainless steel plate can be purchased separately and the user can assemble the adhesive backed diamond grinding disks onto a magnetic stainless steel plate.

MD Grinding Disks:

- ◆ Easy to change disks
- ◆ More convenient for storage
- ◆ Do not need to dedicate a working wheel for each abrasive size

ABRASIVE LAPPING

Lapping Films (Superior Flatness):

The primary advantage of coated abrasives on lapping films is improved flatness across the specimen surface. This is especially true for specimens that have a large variation in the hardness for the specimen constituents. The abrasive is coated onto a polyester film versus a paper backing. The result is a harder base surface. Typically abrasive lapping films include, alumina and diamond. Diamond lapping films are quite common for grinding and polishing of electronic components, including silicon dies. Alumina is very useful for softer materials, such as aluminum, tin, lead, zinc; refractory materials such as rhenium, tungsten and niobium; as well as specimens having solder joints or soft coatings.

Lapping Film Characteristics:

- ◆ Produces flatter or more planar surfaces for materials having large variations in hardness
- ◆ Alternative to paper backed abrasive products

SPECIALTY ABRASIVE GRINDING SURFACES

Alumina Grinding Abrasives (Reduced Embedded Abrasives):

Alumina abrasives are typically used for grinding specimens that have a tendency to embed abrasive particles such as friable silicon carbide. Materials susceptible to embedding abrasive particles include low recrystallizing temperature metals such as tin, zinc and lead; electronic components containing solder joints; soft copper and aluminum metals; as well as, refractory metals such as rhenium, niobium and tungsten. Alumina abrasives are the better choice because they are more durable and do not fracture as easily.

Zirconia Grinding Abrasives (Very Durable Abrasive):

Zirconia is a very durable and hard abrasive. It is a longer lasting abrasive and is an excellent choice for belts grinders and for planar grinding steps on rotary grinder/polishers. The primary drawback is that zirconia grinding requires higher grinding forces as compared to SiC and alumina abrasives. It is also only available in coarser grit sizes.

METALLOGRAPHIC POLISHING

Metallographic Polishing

Metallographic polishing can be broken into two polishing categories: rough polishing and final polishing. Proper polishing requires the correct combination of polishing pad and abrasive, as well as, utilizing proper polishing machine conditions (speed, direction and force).

Minimizing Polishing Artifacts

To minimize polishing artifacts such as edge rounding, phase relief, smeared metal, grain pull-out and inclusion pull-out, the polishing time should be kept to a minimum. This can be accomplished by:

- ◆ minimizing sectioning damage
- ◆ grinding with the finest feasible abrasives
- ◆ using flat polishing base plates

Minimizing sectioning damage and using the correct grinding abrasives are fairly obvious. However, using a flat supporting plate is generally overlooked by most suppliers of metallographic equipment, and if they do consider plate flatness they generally do not go far enough. As a guideline, an 8-inch plate should have no more than a 0.0001 inch (2.5 micron) run out, which represents a 0.6 micron run out over a 1-inch diameter specimen. Recognize that final polishing abrasives have a typical size of 0.05-0.06 micron, thus these tolerances are required to minimize polishing times. In addition, if the specimen is not flat on the polishing plate then a differential pressure occurs across the specimen, which causes polishing relief. Likewise for a 12-inch diameter plate the run out should not exceed 0.0002 inches (5 micron). As a result both polishing times and differential polishing pressures can be minimized.

Suggestion: If your polishing plate is not flat within these tolerances they should be lapped to these tighter tolerances.

SEM Image	Polishing Pad Description	Abrasive Application	Product Image
	CERMESH Metal Mesh cloth - this is a wire mesh material useful for coarse and intermediate lapping/polishing. The texture of this wire allows for the abrasive to become semi-fixed; thus offering the advantage of increased stock removal, while minimizing damage	45, 30 or 15 micron diamond suspensions	
	POLYPAD Polishing Pad - this cloth is a synthetic polyester polishing pad which has a similar action to a nylon pad, with the exception that it is much more durable. It is used in the intermediate polishing steps	15, 9 or 6 micron diamond suspensions	
	TEXPAN Polishing Pad - this is the most commonly used polishing cloth material for the intermediate diamond polishing steps. TEXPAN Polishing pad is a non-woven polishing pad	9 or 6 micron diamond and 3 or 1 micron diamond with colloidal silica	
	Black CHEM 2 Polishing Pad this is a porometric polymer pad which has a consistency similar to a rubber type of pad. Black CHEM 2 pad has a low nap but behaves as an intermediate polishing pad with a performance between low napped and high napped pads	Colloidal silica or diamond and colloidal silica mixtures	

METALLOGRAPHIC POLISHING PADS

SEM Image	Polishing Pad Description	Abrasive Application	Product Image
	GOLDPAD Polishing Pad is a woven polishing pad for intermediate polishing primarily with 1-9 micron diamond	9 or 6 micron diamond and 3 or 1 micron diamond with colloidal silica	
	NYPAD Polishing Pad - this is a woven silk polishing pad for intermediate polishing primarily with intermediate diamond abrasives	9 or 6 micron diamond and 3 or 1 micron diamond with colloidal silica	
	DACRON II Polishing Cloth - this is a woven polishing pad for polishing primarily with 1-15 micron diamond abrasives. The DACRON II pad is the most popular intermediate polishing pad in Europe and is used mostly for polishing metals. Its higher nap provides a very soft and gentle polishing action	3 or 1 micron diamond or alumina	
	ATLANTIS Polishing Pad - is a woven low polishing pad with a foam backing for better matting to the specimen sample. It is an excellent polishing pad for 1-6 micron diamond	3 or 1 micron diamond or alumina	
	MICROPAD Polishing Cloth - this is the most common high napped final polishing pad for most metals and polymers. Its high nap provides it a very soft and gentle polishing action	1 micron or finer final polishing diamond or alumina	
	TRICOTE Polishing Pad - a tight high napped final polishing pad for most metals. It has a tighter nap than the MICROPAD Polishing Pads	1 micron or finer final polishing diamond or alumina	
	NAPPAD Polishing Pad - this is another high napped final polishing pad useful for most metals and polymers. It has a higher nap than MICROPAD, providing it with a very gentle polishing action which is very useful for polishing soft materials such as copper, aluminum and austenitic steels	Alumina or colloidal silica polishing	
	MOLTEC 2 Polishing Pad - this is wool polishing cloth used for final polishing and has a very high nap. It is most commonly used for final polishing metals where edge retention is a minimal consideration	Alumina or colloidal silica polishing	
	FELT PAD Polishing Pad - this is a thick felt pad used for final polishing glass and large surface area parts	Alumina or colloidal silica polishing

Base Plate

DIAMOND POLISHING

Diamond Polishing:

The majority of specimens will use at least one, if not multiple, diamond polishing steps. For metallographic specimen preparation either a man-made synthetic polycrystalline diamond or a monocrystalline diamond is used and the diamond is either mixed into a suspending solution or is used in a paste form. For metallography, diamond is coded by the following color scheme:

Polycrystalline Diamond:

Diamond is the hardest known material (Mohs 10, 8000 HV). It has a cubic crystal structure and is available in either natural or an artificial product. For metallographic applications, both monocrystalline and polycrystalline diamond can be used, however, polycrystalline diamond has a number of advantages over monocrystalline diamond, especially for the finer particle sizes.

Polycrystalline Diamond

Monocrystalline Diamond

Polycrystalline Diamond Advantages:

- Higher cut rates (self-sharpening abrasive)
- Uniform surface finish
- More uniform particle size distribution
- Harder / tougher particles
- Blocky shaped cutting edges
- Higher surface area (300% greater than monocrystalline diamond)
- Hexagonal microcrystallites (equally hard in all directions)

Polycrystalline Diamond Suspensions (1-liter Color Coded)

PACE Product Name	Catalog Number	Qty	Price (\$)

45 micron High Viscosity Polycrystalline Diamond

ZETA 2000S Diamond Dispenser

- ◆ 4 (24v) dedicated, programmable peristaltic pumps
- ◆ Setting adjustments for frequency, duration, start time, total time
- ◆ 7-inch touchscreen interface
- ◆ Compatible with NANO polishing machines as well as competitors' polishing devices
- ◆ Controlled priming for each pump and dispensing lines for more immediate application of the abrasive / lubricant
- ◆ Flow 1.2~90 ml/minute
- ◆ Flex line for easy adjustment

ZETA-2000S Dispenser

45 micron polycrystalline diamond paste (20 grams)	PC-2045-20	20 grams	220.00

Diamond Polishing Pastes:

Diamond pastes have been and continue to be commonly used for hand or manual polishing steps because they are easy to apply and the diamond can be better charged or fixed into the polishing pad as compared to diamond suspensions. They are less commonly used on automated polishing machines because diamond suspensions are easier to apply and they also have a built-in lubricant. The use of diamond pastes requires the application of an additional diamond extender or lubricant, which is typically a glycol or alcohol based solution.

POLYCRYSTALLINE DIAMOND (LOW VISCOSITY)

Polycrystalline Diamond Suspensions (Low Viscosity)

Polishing Pad Applications

- ◆ Rough Polishing: Coarse polishing with 15-45 micron abrasives
-CERMESH Metal Mesh cloth, POLYPAD Pad
- ◆ Intermediate Polishing: For removing most surface damage with 1-9 micron abrasives
-TEXPAN Pad, DACRON II Pad, NYPAD Pad, GOLDPAD Pad, ATLANTIS Pad (most popular)
- ◆ Final Polishing: For removing subsurface damage with 0.05-1 micron abrasives
-TRICOTE Pad, MICROPAD (most popular), NAPPAD Pad, MOLTEC 2 Pad, FELTPAD Pad
- ◆ CMP Polishing: CMP (chemical mechanical polishing with colloidal silica abrasives
-BLACK CHEM 2

MONOCRYSTALLINE DIAMOND SUSPENSIONS (LOW VISCOSITY)

DIAMOND EXTENDERS / LUBRICANTS

Extenders / Lubricants:

Diamond lubricants or extenders are required for diamond pastes; however, they are also useful for thinning diamond suspensions. By alternating between the diamond suspension and the extender the diamond can better fall out of suspension and therefore embed into the polishing pad surface. Extenders / lubricants are typically glycol or alcohol based products.

FINAL POLISHING

Final Polishing:

Final polishing can be accomplished with alumina, diamond, colloidal silica, ceria (cerium oxide) and rouge (iron oxide). However, the most commonly used abrasive for final polishing metals is alumina. Alumina abrasives are classified as calcined, levigated or polycrystalline based on their manufacturing process, crystal structure (hardness) and their sizing process.

Characteristics of Alumina Abrasives

PROPERTY	POLYCRYSTALLINE	CALCINED	LEVIGATED
Crystal structure	Polycrystalline alpha alumina	Monocrystalline alpha alumina	Monocrystalline gamma or alpha alumina
Shape	Rough spherical particles	Hexagonal platelets	Hexagonal platelets
Particle size	0.05-0.25 microns	0.5-15 microns	<1 micron
Specific gravity	3.95 gm/cc	3.95 gm/cc	3.95 gm/cc
Hardness	Knoop 2000 (Mohs 9)	Knoop 2000 (Mohs 9)	Mohs 8-9
Applications	Available in a slurry at either a pH 4 or pH 10, primarily for metal polishing	Available in powders, slurries or suspensions, rough polishing	More commonly known as Linde A (0.3 micron) Linde B (0.05 micron) Linde C (1 micron)

POLYCRYSTALLINE ALUMINA

Polycrystalline Alumina:

Polycrystalline or nanometer alumina is a colloidal alumina manufactured by a proprietary process. Polycrystalline abrasives are milled at either a low or higher pH value in order to avoid agglomeration which occurs near the point of zero charge (PZC). For alumina the PZC is around pH 7. This processing offers two significant improvements over conventional calcined alumina processes:

- ◆ Tighter, more controlled particle size distributions
- ◆ Harder alpha alumina crystal structure

A tighter, more controlled particle size distribution is the result of less particle aggregation. For example, standard calcined 0.05 micron gamma alumina products form aggregate sizes as large as 5 microns. In some cases, these aggregates can be broken down during polishing with harder specimens; however, they are a problem when polishing softer metals (such as aluminum, tin, lead, copper and soft steels) with calcined alumina abrasives.

Nanometer polycrystalline alumina is specifically milled to produce a much smaller aggregate particle size distribution (<0.5 micron)(see PSD charts). Polycrystalline alumina is also a harder alpha alumina particle, therefore making it a more efficient cutting abrasive. Thus, polycrystalline alumina is a much more controlled polishing abrasive as compared to calcined gamma alumina abrasives.

In general, the more modern polycrystalline alumina abrasives outperform traditional calcined and levigated alumina abrasives for final polishing because they produce a much more consistent and better surface finish.

Particle size distribution for 0.05 micron NANOMETER Alumina

Particle size distribution for 0.05 micron Deagglomerated Alumina

Benefits of Polycrystalline Alumina:

- ◆ Improved surface finishes over gamma alumina
- ◆ Less random scratching
- ◆ Higher cutting rates than gamma alumina
- ◆ More uniform surface finish
- ◆ Tighter particle size distributions than gamma alumina
- ◆ Low viscosity for easier dispensing
- ◆ Semi-permanent suspensions

Calcined Colloidal (<1 micron) Powders

Calcined Fine Alumina Powders

Coarse Alumina Powders

CMP ABRASIVES

CMP Polishing Slurries:

CMP (Chemical-Mechanical Polishing) slurries are a combination of colloidal silica and polycrystalline alumina. The colloidal silica provides a chemical polishing action, whereas, the polycrystalline alumina provides a mechanical polishing action. CMP slurries, especially when used in conjunction with vibratory polishing produce flatter surface features and faster polishing rates.

CMP Polishing Slurries

CMP Slurry (Polycrystalline Alumina - Colloidal Silica Mixture)

Colloidal Silica and CMP Polishing Procedures:

Colloidal silica polishing can be used by itself as a polishing abrasive, or in combination with other harder abrasives (CMP Polishing). For polishing hard, and oftentimes brittle materials such as glass and ceramics, the primary polishing mechanism is chemical. For metals, composites and microelectronic components, colloidal silica functions more as a traditional abrasive and mechanically polishes the surface.

For CMP polishing with colloidal silica abrasives, the porous **BLACK CHEM 2** Polishing Pad works well because it allows for the polishing process to generate more heat and thus enhances the chemical polishing rate. **GOLDPAD** and **TEXPAN** polishing pads are also useful for polishing glass, ceramics and composites utilizing a combination of colloidal silica and diamond.

Colloidal silica suspensions also have very good dispersion characteristics, thus the particles are usually very uniform and work well for polishing metals. However, for polishing metals, care must be taken so that the colloidal silica does not dry out as this would effectively result in producing much larger crystallized abrasive particles.

The other key to successful polishing with colloidal silica and CMP abrasives is to clean the specimen surface immediately after the polishing step. The most basic cleaning process should take place, which includes running clean distilled water on the polishing pad for the last 15-30 seconds of the polishing step.

If cleaning is not accomplished before the colloidal silica or CMP abrasive crystallizes on the specimen surface, then either the polishing process should be repeated or the sample can be cleaned with a caustic cleaning solution. A commonly used cleaning solution for most materials after polishing with colloidal silica is a mixture of ammonium hydroxide (NH₄OH) with 30% hydrogen peroxide (H₂O₂).

Note: This solution may adversely react and etch copper and copper alloys.

COLLOIDAL SILICA

Colloidal Silica Polishing:

Colloidal silica abrasives for metallographic polishing typically range in particle size from 20 nm up to 70 nm (0.02-0.07 micron). The concentration of particles typically ranges between 25-50% solids. Even at these high concentrations, colloidal silica can be maintained in a nearly perfect suspension. The electrochemical stability of colloidal silica makes it an excellent chemical mechanical polishing abrasive for polishing ceramics. The main drawback to polishing with colloidal silica is that it will crystallize as it dehydrates. This is particularly troublesome around the lid of an open bottle. One way to reduce this crystallization is to add an ingredient to the colloidal silica suspension in order to reduce the evaporation rate of the water. A comparison of the two main types of colloidal silica, SIAMAT and SIAMAT 2 Colloidal Silica are listed in the following table.

Characteristics of Colloidal Silica Abrasives

PROPERTY	SIAMAT COLLOIDAL SILICA	SIAMAT 2 COLLOIDAL SILICA	SIAMAT BLUE COLLOIDAL SILICA
Particle Size	0.06 micron	0.02 micron	0.05 micron
pH	9.5-10.0	9.2-10.0	9.5-10.0
Concentration	45-50% solids	45-50% solids	45-50% solids
Specific gravity	1.39	1.25	1.39
Viscosity	15 cP	20 cP	15 cP
Applications	Precision surface finishing abrasive for ceramics and glass. Ideal as a CMP abrasive when used by itself or with diamond polishing abrasives	Precision surface finishing abrasive for metals and microelectronic materials	Similar to SIAMAT colloidal silica with blue dye added to distinguish the product from other abrasives suspensions

Colloidal Silica Polishing Suspensions

PACE Product Name	Catalog Number	Qty	Price (\$)
16 oz SIAMAT colloidal silica (0.06 micron)	SI-100A-16	16 oz	27.50
32 oz SIAMAT colloidal silica (0.06 micron)	SI-100A-32	32 oz	48.00
1/2 gallon SIAMAT colloidal silica (0.06 micron)	SI-100A-64	1/2 gallon	78.00

5 gallons SIAMAT 2 colloidal silica (0.02 micron)	SI2-100A-640	5 gallons	610.00

SIAMAT Colloidal Silica

SIAMAT Blue Colloidal Silica

Low Crystallizing SIAMAT 2 Colloidal Silica

UCLEAN-012 Ultrasonic Cleaner

FEATURE	UCLEAN-012 DESCRIPTION
Ultrasonic Frequency	40 KHz transducers
Ultrasonic Power	240 Watts
Timer	1-30 minutes
Heater	250W heating power
Maximum Temperature	176°F (80°C)
Volume of Tank	2.6 gallons (10 L)
Electrical specification	110 / 220V (50/60 Hz)
Volume of Tank	2.5 gallons (9.5 L)
Overall Dimensions (W x D x H)	13 x 11 x 11-inches (330 x 270 x 270 mm)
Tank Dimensions (W x D x H)	12 x 9.4 x 5.9 (300 x 240 x 150 mm)
Weight	14 lbs (6.3 kg)
Catalog Number	UCLEAN-012

Benefits:

- ◆ Reduces abrasive contamination in-between sample preparation steps
- ◆ With an IPA corrosion inhibitor specimens have less staining and etching

Cleaning:

Cleaning and drying are perhaps the most underrated processing steps in specimen preparation. Yet improper cleaning can lead to misleading results. Cleaning is required to remove polishing residue as well as particulates on the surface. Cleaning can be classified into two categories:

Intermediate Cleaning:

Intermediate cleaning is important in order to minimize cross contamination of abrasives and swarf material. Intermediate cleaning is best accomplished with rinsing and ultrasonics. For the best results the specimen and holder should be pre cleaned with water and a cotton swab to remove excess abrasive and swarf.

Final Cleaning:

Final cleaning is the most important cleaning step for removing residue prior to specimen examination. For difficult to clean specimens, ultrasonic cleaning in alcohol can be very helpful.

Cleaning / Drying / Storage Products

PACE Product Name	Catalog Number	Qty	Price (\$)
ULTRACLEAN 2 Ultrasonic Degreasing / Cleaning Solution (32 oz)	UC2-1000-32	32 oz	17.50
ULTRACLEAN 2 Ultrasonic Degreasing / Cleaning Solution (1/2 gallon)	UC2-1000-64	1/2 gallon	32.00
ULTRACLEAN 2 Ultrasonic Degreasing / Cleaning Solution (1 gallon)	UC2-1000-128	1 gallon	62.00
Compressed Non-flammable gas	AIR-0100	each	13.50
Organic Corrosion Inhibitor (100X concentrate in IPA)	PCC-7500-32	32 oz	22.00
Urethane Spray Coating	URE-1000	each	25.00
1.25-inch Plastic Storage Container	STORE-0125	25/pkg	42.00

ETCHING

Etching:

Etching is a process for revealing the structure of the material, common etching techniques include: Chemical, Electrolytic, Thermal, Plasma, Molten salt and Magnetic etching. The two most common techniques are chemical and electrochemical etching. Chemical etching is typically a combination of either an acid or base with an oxidizing or reducing agent in a solute such as alcohol. Electrochemical etching is a combination of chemical etching with an electrical voltage/current.

ETCHANT	COMPOSITION	CONC.	CONDITIONS	COMMENTS
ASTM No. 30	Ammonia Hydrogen Peroxide (3%) DI Water	62.5 ml 125 ml 62.5 ml	Mix Ammonia and water before adding peroxide. Must be used fresh. Swab 5-45 seconds	For etching copper, copper alloys and copper-silver alloys
Adlers Etchant	Copper ammonium chloride Hydrochloric acid Ferric chloride, hydrated DI Water	9 grams 150 ml 45 grams 5 ml	Immersion is recommended for 1-5 seconds	For etching 300 series stainless steel and other superalloys
Carpenters Stainless Steel Etch	FeCl ₃ CuCl ₂ Hydrochloric acid Nitric acid Ethanol	8.5 grams 2.4 grams 122 ml 6 ml 122 ml	Immersion etching at 20°C	For etching duplex and 300 series stainless steels
Inconel Etch	Distilled water Nitric acid Hydrochloric acid Hydrogen Peroxide	90 ml 50 ml 75 ml 35 ml	Immersion etching at 20°C	For etching Inconel alloys
Kalling's No. 2	CuCl ₂ Hydrochloric acid Ethanol	5 grams 100 ml 100 ml	Immersion or swabbing etch at 20°C	For etching duplex and 400 series stainless steels and Ni-Cu alloys and superalloys
Kellers Etch	Distilled water Nitric acid Hydrochloric acid Hydrofluoric acid	190 ml 5 ml 3 ml 2 ml	10-30 second immersion. Use only fresh etchant	Excellent for aluminum and titanium alloys
Klemm's Reagent	Sodium thiosulfate solution Potassium metabisulfite	250 ml Saturated 5 grams	Etch for a few seconds to minutes	For etching alpha-beta brass, bronze, tin, cast iron phosphides, ferrite, martensite, retained austenite, zinc and steel temper embrittlement
Kroll's Reagent	Distilled water Nitric acid Hydrofluoric acid	92 ml 6 ml 2 ml	Swab specimen up to 20 seconds	Excellent for titanium and alloys
Nital	Ethanol Nitric acid	100 ml 1-10 ml	Immersion up to a few minutes.	Most common etchant for iron, carbon and alloys steels and cast iron - Immerse sample for seconds to minutes; Mn-Fe, MnNi, Mn-Cu, Mn-Co alloys.
Marbles Reagent	CuSO ₄ Hydrochloric acid Water	10 grams 50 ml 50 ml	Immerse or swab for 5-60 seconds.	For etching Ni, Ni-Cu and Ni-Fe alloys and superalloys. Add a few drops of H ₂ SO ₄ to increase activity
Murakami's	K ₃ Fe(CN) ₆ KOH Water	10 grams 10 grams 100 ml	CAUTION: Pre-mix KOH and water before adding K ₃ Fe(CN) ₆	Cr and alloys (use fresh and immerse); iron and steels reveals carbides; Mo and alloys uses fresh and immerse; Ni-Cu alloys for alpha phases use at 75°C; WC and alloys use fresh and immerse; WC-Co and complex sintered carbides
Picral	Ethanol Picric acid	100 ml 2-4 grams	Seconds to minutes Do not let etchant crystallize or dry	Recommended for microstructures containing ferrite, carbide, pearlite, martensite and bainite. Also useful for magnetic alloys, cast iron, high alloy stainless steels and magnesium
Vilella's Reagent	Picric Acid Hydrochloric acid Ethanol	1 gram 5 ml 100 ml	Seconds to minutes	Good for ferrite-carbide structures (tempered martensite) in iron and steel

Common Aluminum and Titanium Etchants

PACE Product Name	Applications	Catalog Number	Qty	Price (\$)
Kellers	Most common etchant for aluminum alloys	Kellers	250 ml	110.00
Kroll's	Most common etchant for titanium	Krolls	250 ml	110.00
Titanium Attack Polish	Used as a CMP polishing compound for titanium	TI-AP-16	16 oz	110.00

Zinc-Aluminum Alloy, 200X B.F. (etchant CrO₃, Na₂SO₄)

Zinc-Aluminum Alloy, 100X Polarized (etchant CrO₃, Na₂SO₄)

Common Nickel, Iron, Chromium Alloy Etchants

PACE Product Name	Applications	Catalog Number	Qty	Price (\$)
Adlers	Fe-based Superalloys	Adlers	250 ml	110.00
Inconel Etch	Inconel alloys	Inconel	250 ml	110.00
Marble's	Nickel, nickel-iron alloys	Marbles	250 ml	110.00
Murakami's	Chromium alloys	Murakamis	250 ml	110.00
Waterless Kallings's	Iron and nickel base alloys	Waterless Kallings	250 ml	110.00

Inconel 625, Etched with Adlers, Mag 200X

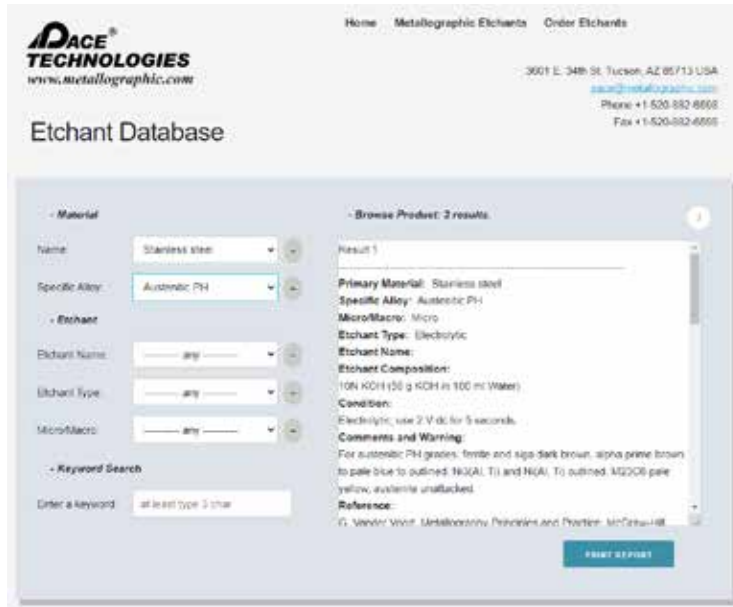

ETCHING

Etching database:

The purpose of etching is to optically enhance the microstructural features such as grain size, phase identification and other microstructural features. Etching selectively alters these microstructural features based on composition, stress or crystal structure.

PACE Technologies has compiled a database of over 3000 etchants which can be accessed at:

<https://database.metallographic.com/pace-etchant.php>

Common Stainless Steel Etchants

ETCHANT	Applications	Catalog Number	Qty	Price (\$)
Adlers etchant	Very effective for etching austenitic 300 series stainless steels	Adlers	250 ml	110.00
Carpenters	300 Series Stainless Steel Etchant	Carpenters	250 ml	110.00
Kallings No. 2	Martensitic 400 series stainless steels	Kallings No. 2	250 ml	110.00
Frys Reagent	Precipitation hardened stainless steels	Frys Reagent	250 ml	110.00
V2A etchant	Austenitic stainless steels	V2A Etchant	250 ml	110.00

Common Copper and Brass Etchants

ETCHANT	Applications	Catalog Number	Qty	Price (\$)
ASTM No. 30	Copper etchant	ASTM No. 30	250 ml	110.00
Copper No. 1	Copper & Brass (nitric acid and DI water)	Copper No. 1	250 ml	110.00
Copper No. 2	Copper & Brass (HCl and ferric chloride)	Copper No. 2	250 ml	110.00
Klemms	Stain etch for brass	Klemms	250 ml	110.00

Miscellaneous Etching Supplies

PACE Product Name	Catalog Number	Qty	Price (\$)
6-inch Cotton Tipped Etchant Applicator	AP-SWAB	100/pkg	7.50

Common Steel Etchants

ETCHANT	Applications	Catalog Number	Qty	Price (\$)
2% Nital	2% is the most common etchant for non-heat treated or welded steels	Nital-2	250 ml	110.00
3% Nital		Nital-3	250 ml	110.00
5% Nital		Nital-5	250 ml	110.00
8% Nital		Nital-8	250 ml	110.00
Picral	Heat treated steels	Picral	250 ml	110.00
Vilella's	Most common etchant for carburized/heat treated steels	Vilella's	250 ml	110.00

Oxide Ceramic Etchants

ETCHANT	CONCENTRATION	CONDITIONS	COMMENTS
Thermal etching	Air	Minutes to hours at 100-200° Celsius below the sintering temperature	Al ₂ O ₃ , Al ₂ O ₃ -MgO
Molten Salt	Potassium hydrogen fluoride melt	5-10 minutes in Pt crucible	Al ₂ O ₃ , Al ₂ SiO ₅
Distilled water Phosphoric acid	15 ml 85 ml	Boiling for 5 minutes to 2 hours	Al ₂ O ₃
Distilled water Sulfuric acid	50 ml 50 ml	Boiling for 1-5 minutes	ZrO ₂

Carbide Ceramic Etchants

ETCHANT	CONCENTRATION	CONDITIONS	COMMENTS
Molten Salt	Sodium or potassium bicarbonate melt	10 minutes in Pt crucible	SiC
Hydrochloric acid Hydrogen peroxide (30%)	10 ml 10 ml	Seconds to minutes	WC

Nitride Ceramic Etchants

ETCHANT	CONCENTRATION	CONDITIONS	COMMENTS
Thermal etching	High purity Nitrogen	Several hours at 1600° Celsius	Si ₃ N ₄
Molten Salt	Potassium hydroxide melt	Seconds to minutes in Pt crucible	Si ₃ N ₄
Hydrofluoric acid	100%	10-15 minutes	Si ₃ N ₄

HARDNESS TESTING

ALPHA-MHT-1000Z MICROHARDNESS TESTER

ALPHA-MHT-1000Z

ALPHA-MHT-1000Z

- Vickers or Knoop
- Auto-turret
- Built-in printer
- Load range 10-1000 grams
- Scales (HV, HK)
- LED display
- User friendly
- Robust and durable design

ALPHA-MHT-1000Z Control Panel

ALPHA-MHT-2000Z2 MICROHARDNESS TESTER

ALPHA-MHT-2000Z2

ROCKWELL HARDNESS TESTERS

OMEGA-RT2 MANUAL ROCKWELL TESTER

OMEGA-RT2

OMEGA-RT2

- Manual Rockwell Tester
- 60 Kgf, 100 Kgf and 150 Kgf loading
- Analog display
- Robust and durable design
- Manual loading control
- User friendly
- Economical

OMEGA-RT-60/150 ROCKWELL TESTER

OMEGA-RT-60/150

OMEGA-RT-60/150

- Semi-Automated Rockwell Tester
- Initial test force 10 Kgf loading
- Total test force 60, 100 and 150 Kgf loading
- Automatic conversion to 18 different hardness scales
- LCD displays hardness
- Robust and durable design
- Loading time and dwell time (1-60 seconds)
- Auto hardness conversion
- User friendly
- Economical

OMEGA-RST-15/150 SUPERFICIAL ROCKWELL TESTER

OMEGA-RST-15/150

OMEGA-RST-15/150

- Semi-Automated Dual Rockwell / Superficial Tester
- Total test force 15, 30, 45, 60, 100 and 150 Kgf loading
- Automatic conversion to 18 different hardness scales
- LCD displays hardness
- Robust and durable design
- Loading time and dwell time (1-60 seconds)
- Auto hardness conversion
- User friendly
- Economical

Manual Rockwell Hardness Tester

2 year warranty
Limited Warranty

FEATURE	OMEGA-RT2
Rockwell Scales	HRA, HRB, HRC
Preliminary test force	10 Kgf (98.07N)
Full test force	60 Kgf, 100 Kgf, 150 Kgf
Loading control	Manual
Instrument Throat Height	6.5-inch (165 mm)
Maximum Sample Height	7.3-inch (185 mm)
Hardness Resolution	0.5 HR
Dimensions (W x D x H)	9.6 x 20.5 x 27.6-inch (245 x 520 x 700mm)
Weight	172 lbs (78 kg)

Benefits:

- ◆ Basic Rockwell Tester
- ◆ Economical
- ◆ Easy to Use

AUTOMATED ROCKWELL TESTERS

OMEGA-AUTO-RT HARDNESS TESTER

OMEGA-AUTO-RT

OMEGA-AUTO-RT

- Fully-automated Rockwell Tester
- Initial test force 10 Kgf loading
- Total test force 60, 100 and 150 Kgf loading
- One touch operation
- Auto load change
- Auto lifting
- Auto loading
- Auto measuring
- Auto conversion
- Ability to set upper and lower limits
- Robust and durable design

OMEGA-AUTO-ST HARDNESS TESTER

OMEGA-AUTO-ST

OMEGA-AUTO-ST

- Fully-automated Superficial Rockwell Tester
- Total test force 15 Kgf, 30 Kgf and 45 Kgf loading (Superficial)
- One touch operation
- Auto load change
- Auto lifting
- Auto loading
- Auto measuring
- Auto conversion
- Color touch screen
- Ability to set upper and lower limits
- Robust and durable design

OMEGA-AUTO-RST HARDNESS TESTER

OMEGA-AUTO-RST

OMEGA-AUTO-RST

- Fully-automated Dual Rockwell / Superficial Rockwell Tester
- 15 Kgf, 30 Kgf and 45 Kgf loading (Superficial)
60 Kgf, 100 Kgf and 150 Kgf loading (Rockwell)
- One touch operation
- Auto load change
- Auto lifting
- Auto loading
- Auto measuring
- Auto conversion

Limited Warranty

OMEGA-5000-HV

REQUEST A QUOTE

www.metallographic.com

OMEGA-5000-HV

- Semi-automated Macro Vickers Tester
- 1, 2, 2.5, 3, 5, 10, 20, 30 and 50 Kgf loading
- 10X and 20X objectives
- Touch screen control
- Auto turret
- Auto focusing
- Auto measurement
- Robust and durable design

FEATURE	OMEGA-5000-VZ
Test forces	1kgf, 2kgf, 2.5kgf, 3kgf, 5kgf, 10kgf, 20kgf, 30kgf, 50kgf
Eyepieces	10X
Objectives	10X, 20X
Total Magnification	100X, 200X
Loading Method	Automatic (Loading/Dwell/Unloading)
Dwell time	Adjustable 5-60 seconds
Shifting between Objective and Indenter	Automatic Shifting
Resolution	0.25µm / 0.125µm
Illumination	Halogen
Maximum Sample Height	6.7-inch (170 mm)
Power	110 or 220V
Dimensions (W x H x D)	11 x 21 x 25 inch (280 x 530 x 630mm)
Weight	77 lbs (35 kg)
Part No.	OMEGA-5000-HV

Macro Vickers Test Blocks

PACE Product Name	Catalog Number	Qty	Price (\$)
Heavy Load Vickers (1 kg to 50 kg)	MV020	each	675.00

Steel Hardness Conversion Table:

This table compares the relative tensile strength to the approximate hardness of steel for the Brinell, Rockwell B, Rockwell C and Vickers scales.

Brinell Hardness (HB)	Rockwell (HRC)	Rockwell (HRB)	Vickers (HV)	Tensile Strength (N/mm ²)
3000 kg 10 mm Ball	150 kg Diamond	100 kg 1/16-inch Ball	Diamond 120 kg	Approx.
800	72			
745	68			
695	64			
641	61			
592	57		727	
552	55		649	
504	52	118	549	
456	48	116	490	1569
402	43	114	424	1390

METALLOGRAPHIC MICROSCOPES

IM-3000B Brightfield Metallographic Microscope

FEATURE	IM-3000B DESCRIPTION
Illumination Techniques	Brightfield and Polarized Light
Objectives:	Infinite Plan Achromatic 4.5X/0.1 Infinite Plan Achromatic 10X/0.25 Infinite Plan Achromatic 20X/0.4 Infinite Plan Achromatic 50X/0.75 Infinite Plan Achromatic 100X/0.90
Eyepiece:	Wide field WF 10X (field no. 22 mm)
Trinocular Head:	Trinocular, 45 degree inclination ratio Observation: 80%, photo 20%
Focusing System:	Coaxial coarse/fine focus (2 micron) ravel (stage to focal plane) up 1 mm, down 7 mm
Nosepiece:	Quintuple
Mechanical Stage:	X-Y stage Travel range: 1.6 x 1.6-inches (40 x 40 mm) Size: 8.9 x 7-inch (226 x 178 mm)
Illumination:	12V/50W Halogen Lamp
Color Filters:	Grey, Blue, Green color filters & ground glass
Electrical Specification	110V/220V (50/60 Hz) (single phase)

2 year warranty
Limited Warranty

Benefits:

- ◆ Brightfield illumination
- ◆ Polarized light illumination
- ◆ X-Y Stage control
- ◆ Multiple camera ports

METALLOGRAPHIC SOFTWARE

Measurement Modules

MODULE	MEASUREMENT	MEASUREMENT BASIS	ICON / web link
Measurement	Manually draw lines on traces, shapes	Straight length, angle, curved length, width, area, radius, perimeter, area by keyboard	
Grain Size	Heyn lineal intercept procedure, Abrams Three-Circle Procedure, Random Line Intersection Methods, Jeffries Planimetric Method, Comparison Procedure Method	ASTM E112	
Gray Iron	Graphite flakes are described by the type and distribution of graphite in cast iron with the following three classifications: Type VII for graphite form, A-E distribution of graphite and graphite size (1-largest to 8-smallest)	ASTM A-247	
SG Iron	Nodularity describes the type and distribution of graphite in cast iron with the following three classifications: Types I-VI for graphite form, A-E distribution of graphite and graphite size (1-largest to 8-smallest)	ASTM A-247-67	
Carbide Banding	Estimates the amount of iron carbide or cementation in steels and cast irons. Carbide is measured as a volume fraction	ASTM E562 & E1245	
Porosity	Porosity are voids in the material caused by entrapped air and incomplete or poor sintering. Porosity can be measured as a volume fraction	ASTM E562 & E1245	
Inclusion	Characterizes the type, size and severity of the inclusion in wrought steel. The types include: SULFIDE (A TYPE), ALUMINA (B TYPE) SILICATE (C TYPE), GLOBULAR (D TYPE). Size is characterized as H-heavy or T-thin. Severity Level is based on the number or length	ASTM E45	
Coating Thickness	Measures a coating thickness after cross sectioning the specimen	ASTM B487	
Spheroidization	Nodules acquire blue color and non-nodules are set to a red color. Nodules are designated by Roman numbers from I to VI and by size using Arabic numbers 1 to 8. The results are reported along with the calculated nodules/sq mm	ASTM A892	
Decarburization	Decarburization is the loss of carbon at the metal surface due to chemical reaction(s) with the contacting media. The analysis estimates the average or greatest depth of decarburization in hardened or non-hardened steel products	ASTM E1077	
Segmentation or Phase Analysis	Phases are defined as physically homogenous and distinct constituents of the material. The phases are partitioned or segmented based on the intensity / gray scale of the various constituents and are characterized and measured using area or volume fraction measurements	ASTM E562 & E1245	
DAS (Dendrites)	Dendritic Arm Spacing (DAS) measures the mean spacing, minimum and maximum spacing as well as the standard distribution.		
Stitching	Stitching is the process of combining multiple images together for higher magnification analysis over a larger area. For example, this would be very useful for analyzing the thickness of a thin coating over a larger range.

METALLOGRAPHIC PROCEDURES

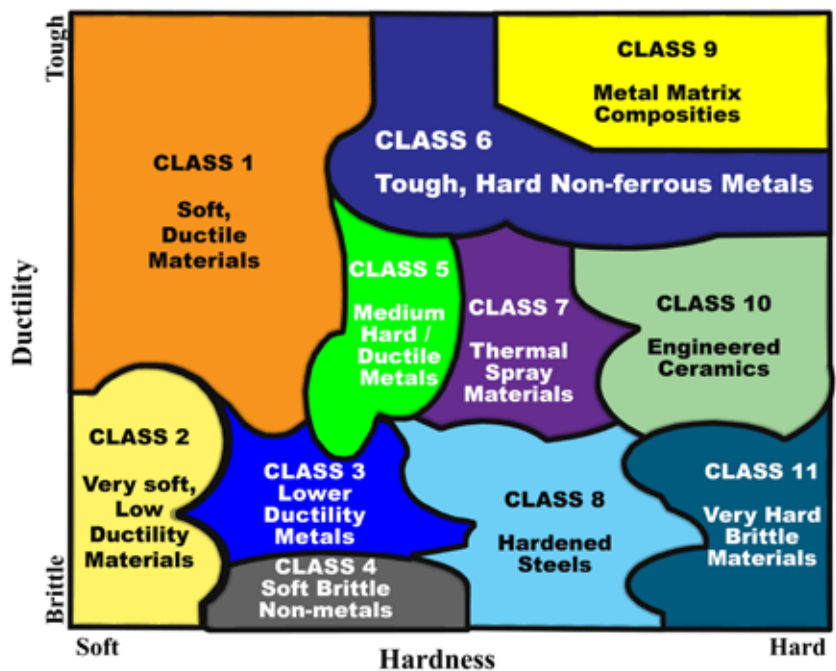

SAMPLE PREPARATION BASICS:

Metallographic specimen preparation requires a knowledge of the specimen properties, the most important characteristics being hardness and ductility of the metallographic specimen. Based on these material properties, the proper metallographic consumables and equipment parameters can be determined. The following charts plot the relative hardness and ductility for most metallographic materials.

SAMPLE PREPARATION CLASSES:

From this chart the hardness / ductility is categorized into eleven different classes. Each of these classes then represents a sample preparation method based on the mechanical properties of the material.

PREPARATION GUIDELINES

Class	Materials	Overview
CLASS 1	Soft, ductile materials (e.g. aluminum, copper, lead, tin, zinc, PMC's)	Relatively easy to prepare most materials in this Class with the use of alumina abrasives and 1-2 polishing steps
CLASS 2	Very soft, low ductility materials (e.g. rhenium, niobium, gold, silver)	Can be difficult to prepare because these materials are very soft and abrasives can become embedded into the specimen
CLASS 3	Low ductility metals (e.g. powder metals and cast irons)	Initial grinding with SiC abrasives is recommended, however, rough polishing must minimize pull-out
CLASS 4	Soft, brittle nonmetals (e.g. silicon, GaAs, electronic devices, ferrites)	Subsurface damage must be minimized in cutting, grinding and polishing of these materials. This requires the proper selection and application of the abrasive
CLASS 5	Medium hard, ductile metals (e.g. soft steels, stainless steels)	Relatively easy to prepare most materials in this Class with the use of SiC abrasives and 1-2 polishing steps
CLASS 6	Tough, hard, non-ferrous metals (e.g. super alloys, titanium)	Relatively easy to prepare most materials in this Class with the use of SiC abrasives and 1-2 polishing steps
CLASS 7	Thermal spray materials	Can pose significant preparation challenges depending upon the properties of the coating. See specific preparation procedures
CLASS 8	Hardened steels (e.g. high carbon and tool steels)	Relatively easy to prepare most materials in this Class with the use of SiC abrasives and 1-2 polishing steps
CLASS 9	Metal Matrix Composites	Very dependent upon both the matrix and filler materials properties. See specific preparation procedures
CLASS 10	Engineered Ceramics (e.g. zirconia, silicon nitride)	Successful preparation is typically accomplished with colloidal silica by CMP polishing
CLASS 11	Very hard, brittle materials (e.g. glass, minerals, CERMETS)	Minimize initial damage and use CMP polishing with colloidal silica abrasives

NANO-FEMTO-ZETA

PROCEDURE RECOMMENDATIONS

CLASS 1 - Ductile Materials

Examples include aluminum, copper, tin, lead, zinc and polymer matrix composites (PMC's).

Description:

CLASS 1 materials are relatively soft materials which have a wide range of industrial uses.

Preparation Challenges:

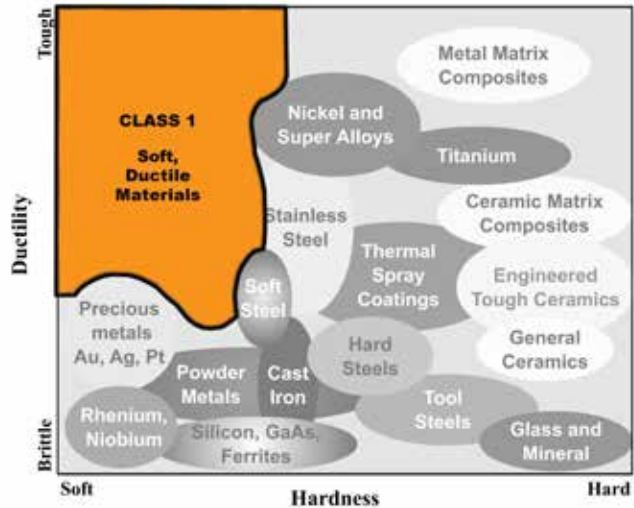

The difficulty in preparing these materials arises from the fact that these materials are very soft and often have oxide inclusions (aluminum and copper). Proper specimen preparation minimizes abrasive embedding and retains the specimen oxides, thus eliminating scratching and smearing. If the specimen is not prepared properly, the microstructure will not be accurately represented.

Sectioning:

MAXCUT abrasive blade (MAX-C or MAX-E series)

Mounting:

Compression mounting with Phenolic, Epoxy or Diallyl Phthalate compression mounting resins

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
P120 grit ALO paper P240 grit ALO paper	Water	5-10 lbs	100/100	Planar 1 min.	Off Off	N/A	
P500 grit ALO paper P1200 grit ALO paper	Water	5-10 lbs	100/100	1 min. 1 min.	Off Off		
1 micron DIAMAT diamond on ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	100/100	2 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on NAPPAD polishing pad	-	5-10 lbs	100/100	1 min.	15 seconds / 5 seconds		

Pure zinc, 100X (DIC), Etchant 10 grams NaOH in 100 ml D.I. water for 5 seconds

Tough Pitch Copper, 100X (B.F.), Etchant NH4OH/H2O2 for 5 seconds

CLASS 2 - Very Soft, Ductile Materials

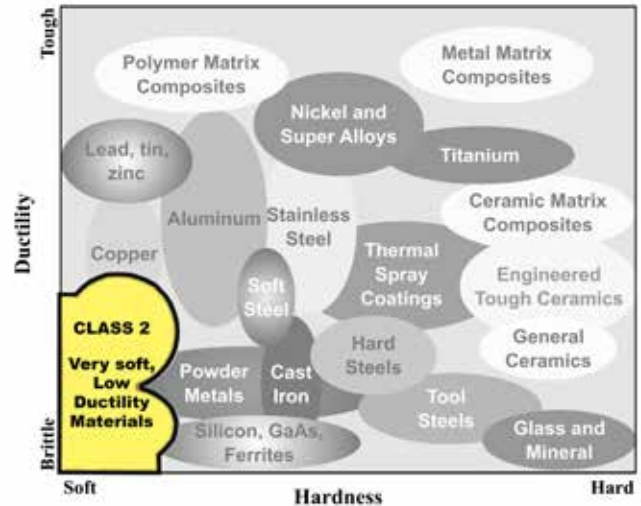

Examples include refractory metals (tungsten, rhenium, niobium, molybdenum), rare earths, precious metals.

Description:

CLASS 2 materials include refractory metals such as rhenium, niobium and tungsten which have very high melting temperatures; however, they are typically very soft and require the same specimen preparation considerations as other very soft metals.

Preparation Challenges:

For very soft materials, any loose or fractured abrasive particles can become easily embedded. This makes specimen preparation very difficult because it gums up diamond grinding disks or the specimen can become embedded with fractured SiC particles when ground with SiC papers. The key to preparation of these materials is to use tougher alumina abrasives and to chemically etch the specimen in-between each grinding step. The purpose of etching is to remove the embedded particles so as not to carry them over to the next grinding step as contamination.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
P120 grit ALO paper P240 grit ALO paper	Water	5-10 lbs	100/100	Planar 1 min.	Off Off	N/A	
P500 grit ALO paper P1200 grit ALO paper	Water	5-10 lbs	100/100	1 min. 1 min.	Off Off		
1 micron DIAMAT diamond on ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	100/100	2 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on MICROPAD polishing pad	-	5-10 lbs	100/100	1 min.	15 seconds / 5 seconds		

99.9% Silver, etched with ammonia peroxide, 200X B.F

Rhenium (BF), etched

PROCEDURE RECOMMENDATIONS

CLASS 3 - Lower Ductility Metals

Examples of lower ductility metals include powder metals and cast iron.

Description:

Powder metallurgy is an example of a CLASS 3 low ductility materials which is a very useful manufacturing process for parts designed with hard-to-machine geometries. The process includes pressing a metal powder into its shape and then sintering it just below the melting temperature of the alloy.

Preparation Challenges:

The metallographic specimen preparation of powder metallurgy samples is affected by the specimen's composition, packing and sintering conditions. Microstructural features of interest include: porosity, grain size, inclusions and orientation of voids. Proper metallurgical preparation takes into account that the microstructure may be porous and perhaps somewhat brittle due to inadequate sintering conditions.

Vacuum impregnation is often used to support voids and porosity before initial grinding. In addition, metal smeared into pores can be removed by an intermediate etch in-between polishing steps.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
120 grit SiC paper 240 grit SiC paper	Water	5-10 lbs	200/200	Planar 1 min.	Off Off	N/A	
360 grit SiC paper 600 grit SiC paper 800 grit SiC paper 1200 grit SiC paper	Water	5-10 lbs	200/200	1 min. 1 min. 1 min. 1 min.	Off Off Off Off		
1 micron DIAMAT diamond on GOLDPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	200/200	2 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on TRICOTE polishing pad	-	5-10 lbs	100/100	30 sec.	15 seconds / 5 seconds		

Tungsten refractory metal, 200X (DIC), etched with Murakami's reagent

Graphite cast iron, 2% nital etchant, 500X

CLASS 4 - Soft, Brittle Nonmetals (Electronics)

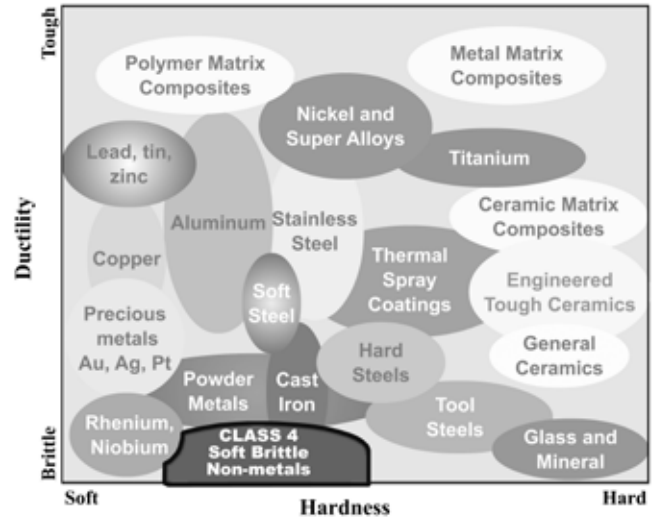

Examples include ceramic capacitors, silicon, GaAs, ferrites, PZT's, MEMS devices.

Description:

Ceramic capacitors are an example of a CLASS 4 softer more brittle types of material. These materials are typically very small, inexpensive devices used in cell phones, computers and other electronic products. MLC devices are constructed of alternating layers of metal and ceramic, with the ceramic material acting as the dielectric.

Preparation Challenges:

Microstructural analysis of a BaTiO₃ ceramic capacitor includes looking for missing metal layers, as well as examining for gaps and voids in the ceramic substrate. Microstructural preparation of multi-layer BaTiO₃ ceramic capacitors requires minimizing polishing relief and damage to the coating or ceramic substrate. This is accomplished by filling the existing voids with a castable resin under vacuum and then curing at a higher pressure. Initial grinding is required to open up the capacitor. The goal is to minimize microstructural damage at this step. Rough and final polishing are recommended on woven polishing pads using diamond and colloidal silica, respectively.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
30 micron Diamond Film 15 micron Diamond Film	POLYLUBE Diamond Extender	5-10 lbs	200/200	Planar 3 min.	Off Off	N/A	
9 micron Diamond Film 6 micron Diamond Film 3 micron Diamond Film	POLYLUBE Diamond Extender	5-10 lbs	200/200	2 min. 2 min. 2 min.	Off Off Off		
1 micron DIAMAT diamond on ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	200/200	1 min.	15 seconds / 3 seconds		
MICROPAD polishing pad	Colloidal Silica	5-10 lbs	200/200	30 sec.	15 seconds / 5 seconds		

Electronic die cross section

Electronic die cross section

PROCEDURE RECOMMENDATIONS

CLASS 5 -Medium Hard, Ductile Metals

Examples include stainless steel, soft and medium hard steels.

Description:

CLASS 5 steels are ferrous alloys of iron containing relatively low concentrations of carbon (<2%). Steels also have a wide range of properties due to their ability to be heat treated and annealed. Depending upon the carbon concentration and other alloying elements, the microstructure of steel can be modified by heating, quenching and stress relief (annealing). Common microstructures include pearlite and ferrite for slow cooled low carbon steels and martensite for fast cooled high carbon steels. Pearlite and ferrite are relatively soft and ductile, whereas martensite is hard and brittle.

Preparation Challenges:

Metallographic specimen preparation is relatively straight forward.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
120 grit SiC paper 240 grit SiC paper	Water	5-10 lbs	200/200	Planar 1 min.	Off Off	N/A	
360 grit SiC paper 600 grit SiC paper 800 grit SiC paper 1200 grit SiC paper	Water	5-10 lbs	200/200	1 min. 1 min. 1 min. 1 min.	Off Off Off Off		
1 micron DIAMAT diamond on GOLDPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	200/200	2 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on TRICOTE polishing pad	-	5-10 lbs	100/100	30 sec.	15 seconds / 5 seconds		

Carbon Steel Weld, mag. 50X, Etched 2% Nital

1018 Water Quenched steel, 400X (B.F.), etched with 2% nital, Structure is Bainite

PREPARATION GUIDELINES (CLASS 5)

CLASS 6 - Tough, Hard Nonferrous Metals

Examples include titanium, Inconel, Ni-Cr alloys, superalloys, nickel and cobalt alloys.

Description:

CLASS 6 materials include titanium alloys which are very useful because they have a good strength-to-weight ratio. This makes them ideal for use in areas ranging from aerospace to sports equipment.

Preparation Challenges:

Metallographic preparation of titanium and titanium alloys is fairly straight forward by conventional metallographic techniques.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
120 grit SiC paper 240 grit SiC paper	Water	5-10 lbs	300/300	Planar 1 min.	Off Off	N/A	
360 grit SiC paper 600 grit SiC paper	Water	5-10 lbs	300/300	1 min. 1 min.	Off Off		
9 micron DIAMAT diamond on POLYPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	3 min.	15 seconds / 3 seconds		
6 micron DIAMAT diamond on TEXPAN polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	3 min.	15 seconds / 3 seconds		
1 micron DIAMAT diamond on GOLDPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	3 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on TRICOTE polishing pad	-	5-10 lbs	200/200	30 sec.	15 seconds / 5 seconds		

Fe-Ni-Co-Al Alloy, 400X (Polarized Light)

Inconel-625, Mag. 100X, Etchant-Carpenters

PROCEDURE RECOMMENDATIONS

CLASS 7 - Thermal Spray Materials

Examples include powder spray coatings, ceramic coatings, intermetallic coatings.

Description:

CLASS 7 Thermal spraying techniques are coating processes in which melted (or heated) materials are sprayed onto a surface. Thermal spraying can provide various coating thicknesses (20 microns to several mm) over a large area. Coating materials available for thermal spraying include metals, alloys, ceramics, plastics and composites.

Preparation Challenges:

Metallographic preparation of thermal spray coatings can be tricky; however, minimizing damage and understanding the chemical and mechanical properties of the coating and substrate will greatly improve successful specimen preparation. Note for WC-Co coatings, the cobalt is reactive with water so final polishing with 0.25 micron diamond replaces traditional alumina water based suspensions/slurries.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
240 grit SiC paper	Water	5-10 lbs	200/200	Planar	Off	N/A	
320 grit SiC paper	Water	5-10 lbs	200/200	1 min.	Off		
400 grit SiC paper				1 min.	Off		
600 grit SiC paper				1 min.	Off		
800 grit SiC paper				1 min.	Off		
1200 grit SiC paper				1 min.	Off		
3 micron DIAMAT diamond on GOLDPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	200/200	2 min.	15 seconds / 3 seconds		
1 micron DIAMAT diamond on ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	200/200	2 min.	15 seconds / 3 seconds		
0.05 micron Nanometer alumina on MICROPAD polishing pad	Vibratory Polishing			15-30 minutes			

Nickel Chrome Thermal Spray Coating, as polished, Mag 1000x (B.F.)

Nickel-Aluminum Thermal Spray Coating, as polished, Mag 500x (B.F.)

CLASS 8 - Hardened Steels

Examples include case hardened steels, tool steels, and through-hardened steels.

Description:

CLASS 8 Iron and steels play an important role in the world of structural and mechanical metals. Steel, in particular, is very useful because its hardness, wearability and toughness can be altered significantly by heat treating and annealing processes. Tool steels have high hardness ($R_c > 60$) and generally are used with alloying metals such as vanadium, molybdenum and manganese.

Preparation Challenges:

Metallographic specimen preparation is relatively straight forward.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
120 grit SiC paper 240 grit SiC paper	Water	5-10 lbs	300/300	Planar 1 min.	Off Off	N/A	
360 grit SiC paper 600 grit SiC paper	Water	5-10 lbs	300/300	1 min. 1 min.	Off Off

0.05 micron Nanometer alumina on NAPPAD polishing pad	-	5-10 lbs	200/200	30 sec.	15 seconds / 5 seconds		

1095 Steel, Water Quenched, etched with Picral, 1000X B.F. Martensite structure

Nitrided steel, 200X (BF), Etchant Picral

PROCEDURE RECOMMENDATIONS

CLASS 9 - Metal Matrix Composites

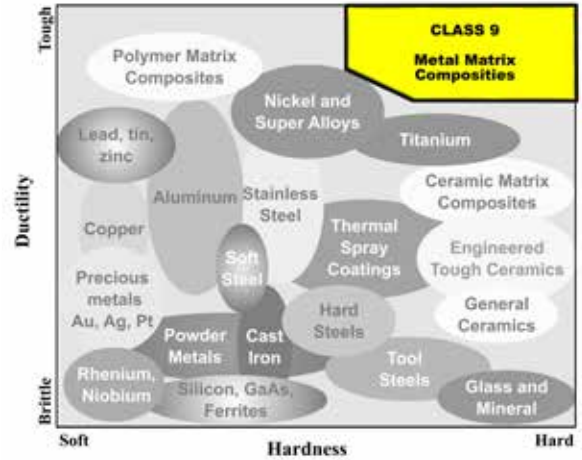

Examples include ceramic fibers in a metal matrix and/or ceramic particles in a metal matrix.

Description:

CLASS 9 Metal matrix composite applications have been found in high performance sporting goods and high performance military applications. They are primarily used to combine the hardness and energy absorbing characteristics of the ceramic with the bonding and ductility characteristics of the metal.

Preparation Challenges:

Hard particles in a metal matrix can be difficult to microstructurally prepare because of particle pull-out, as well as excessive polishing relief between the hard particles and the softer matrix.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
75 micron diamond grinding disk	Water	5-10 lbs	300/300	Planar	Off	N/A	
30 micron DIAMAT diamond suspension on CERMESH Metal Mesh cloth	-	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
9 micron DIAMAT diamond on POLYPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
3 micron DIAMAT diamond on GOLDPAD or ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
SIAMAT Colloidal silica on TEXPAN polishing pad	-	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		

SiC particles in an Aluminum Matrix, 400X (DIC)

Zirconium Diboride particles in a Titanium Matrix Etched, 1000X (DIC)

PREPARATION GUIDELINES (CLASS 9)

CLASS 10 - Engineered Ceramics

Examples include silicon nitride, zirconia, SiSiC, silicon carbide, boron carbide, alumina and ceramic matrix composites

Description:

CLASS 10 Engineered ceramics have found increasing applications for high temperature, corrosion resistance, low wearability and a number of other applications. An example of a CLASS 10 specimen preparation technique is for aluminum oxynitride (AlON) which is a ceramic composed of aluminum, oxygen and nitrogen. It is a semi-transparent ceramic that is harder than glass.

Preparation Challenges:

Engineered ceramics are very hard therefore specimen preparation procedures generally require a CMP (chemical mechanical polishing) component to remove induced microstructural damage. When examining the surface, it is recommended that a sputter coating be used to increase surface reflectivity.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
75 micron diamond grinding disk	Water	5-10 lbs	300/300	Planar	Off	N/A	
30 micron DIAMAT diamond suspension on CERMESH Metal Mesh cloth	-	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
6 micron DIAMAT diamond on TEXPAN polishing pad	SIAMAT colloidal silica	10 lbs	300/300	5 min.	15 seconds / 3 seconds		
1 micron DIAMAT diamond on GOLDPAD or ATLANTIS polishing pad	SIAMAT colloidal silica	10 lbs	300/300	5 min.	15 seconds / 3 seconds		
SIAMAT Colloidal silica on TEXPAN polishing pad	-	10 lbs	300/300	5 min.	15 seconds / 3 seconds		

AION ceramic, B.F. 1000x (as polished)

SiAION ceramic, etched in molten KOH, Mag 20 KX

PROCEDURE RECOMMENDATIONS

CLASS 11 - Very Hard Hard Brittle Materials & CERMETS

Examples include cermets such as tungsten carbide, glass and minerals.

Description:

CLASS 11 CERMETS, glass and minerals are typically very hard. CERMETS are typically very wear resistant and very tough materials, whereas minerals and glass tend to be more brittle.

Preparation Challenges:

The key to proper specimen preparation of CERMET materials such as tungsten carbide is to grind with a semi-fixed abrasive (polycrystalline diamond on a metal mesh cloth), followed by combining diamond abrasives with a CMP (chemical mechanical polishing) abrasive such as SIAMAT™ colloidal silica.

Abrasive / Surface	Lubricant	Force / sample	Speed (Head / base)	Time (minutes)	Dispenser (frequency / duration)	Individual Force Mode	Central Force Mode
75 micron diamond grinding disk	Water	5-10 lbs	300/300	Planar	Off	N/A	
30 micron DIAMAT diamond suspension on CERMESH Mesh cloth	-	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
9 micron DIAMAT diamond on POLYPAD polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
3 micron DIAMAT diamond on GOLDPAD or ATLANTIS polishing pad	DIALUBE Purple Extender	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		
SIAMAT Colloidal silica on TEXPAN polishing pad	-	5-10 lbs	300/300	5 min.	15 seconds / 3 seconds		

Tungsten carbide, 2000X (DIC), etched with 50% HNO₃ and 50% HCl

Periclase, 200X (B.F.) Thermal etching at 1200 Celsius for 2 hours
